

The background of the slide is a photograph of a snowy, uneven terrain. In the upper left, there are some dry, brownish plants or grasses sticking out of the snow. A series of animal tracks, likely from a large carnivore, are visible in the snow, starting from the bottom left and moving towards the upper right. A solid red vertical line is positioned to the left of the main title text.

Wetland Techniques James T. Anderson, Craig A. Davis, 2013-10-10 Wetlands serve many important functions and provide numerous ecological services such as clean water wildlife habitat nutrient reduction and flood control Wetland science is a relatively young discipline but is a rapidly growing field due to an enhanced understanding of the importance of wetlands and the numerous laws and policies that have been developed to protect these areas This growth is demonstrated by the creation and growth of the Society of Wetland Scientists which was formed in 1980 and now has a membership of 3 500 people It is also illustrated by the existence of 2 journals *Wetlands* and *Wetlands Ecology and Management* devoted entirely to wetlands To date there has been no practical comprehensive techniques book centered on wetlands and written for wetland researchers students and managers This techniques book aims to fill that gap It is designed to provide an overview of the various methods that have been used or developed by researchers and practitioners to study monitor manage or create wetlands Including many methods usually found only in the peer reviewed or gray literature this 3 volume set fills a major niche for all professionals dealing with wetlands

Small Carnivores Emmanuel Do Linh San,Jun J. Sato,Jerrold L. Belant,Michael J. Somers,2022-07-13 Small Carnivores Evolution Ecology Behaviour and Conservation This book focuses on the 232 species of the mammalian Order Carnivora with an average body mass 21.5 kg Small carnivores inhabit virtually all of the Earth's ecosystems adopting terrestrial semi fossorial semi arboreal or semi aquatic lifestyles They occupy multiple trophic levels and therefore play important roles in the regulation of ecosystems such as natural pest control seed dispersal and nutrient cycling In areas where humans have extirpated large carnivores small carnivores may become the dominant predators which may increase their abundance mesopredator release to the point that they can sometimes destabilize communities drive local extirpations and reduce overall biodiversity On the other hand one third of the world's small carnivores are threatened or near threatened with extinction This results from regionally burgeoning human populations industrial and agricultural activities causing habitat reduction destruction fragmentation and pollution Overexploitation persecution and the impacts of introduced predators competitors and pathogens have also negatively affected many small carnivore species Although small carnivores have been intensively studied over the past decades bibliometric studies showed that they have not received the same attention given to large carnivores Furthermore there is huge disparity in how research efforts on small carnivores have been distributed with some species intensively studied and others superficially or not at all This book aims at filling a gap in the scientific literature by elucidating the important roles of and documenting the latest knowledge on the world's small carnivores pThis is a book that has been needed for decades It is the first compendium of recent research on a group of mammals which has received almost no attention before the early 1970s This book covers a wide range of subdisciplines and techniques and should be considered a solid baseline for further research on this little known group of highly interesting mammals As our knowledge regarding how ecosystems function increases then the valuable role of small carnivores and the necessity for their conservation should be regarded as of paramount importance The topics covered in this book should therefore be of great interest not only to academics and wildlife researchers but also to the interested layman

Applied Ecology and Human Dimensions in Biological Conservation Luciano M. Verdade,Maria Carolina Lyra-Jorge,Carlos I. Piña,2014-05-12 This book provides both the conceptual basis and technological tools that are necessary to identify and solve problems related to biodiversity governance The authors discuss intriguing evolutionary questions which involve the sometimes surprising adaptive capacity of certain organisms to dwell in altered and or changing environments that

apparently lost most of their structure and functionality Space and time heterogeneities are considered in order to understand the patterns of distribution and abundance of species and the various processes that mold them The book also discusses at which level from genes to the landscape including individuals populations communities and ecosystems men should intervene in nature in order to prevent the loss of biodiversity

Molecular Ecology and Conservation Genetics of Neotropical Mammals Maximiliano Nardelli, Juan Ignacio Túnez, 2021-04-02 Although all living beings modify their environment human beings have acquired the ability to do so on a superlative space time scale As a result of industrialization and the use of new technologies the anthropogenic impact has been increasing in the last centuries causing reductions in the sizes or the extinction of numerous wild populations In this sense from the field of conservation genetics various efforts have been made in recent decades to provide new knowledge that contributes to the conservation of populations species and habitats In this book we summarize the concrete contributions of researchers to the conservation of the Neotropical mammals using Molecular Ecology techniques The book is divided into three major sections The first section provides an up to date review of the conservation status of Neotropical mammals the applications of the molecular markers in its conservation and the use of non invasive and forensic genetic techniques The second and third sections present respectively a series of case studies in various species or taxonomic groups of Neotropical mammals
