Nonlinear Dynamics Of Surface Tension Driven Instabilities With A Foreword By I Prigogine:

Nonlinear Dynamics of Surface-Tension-Driven Instabilities P. Colinet (Pierre.), Jean Claude Legros, Manuel G. Velarde, 2001-08-15 This book provides the reader with a progressive and complete insight into a vast field of nonlinear physics While the introductory first chapter describes nonlinear dissipative structures at a general level in fluid mechanics as well as in other fields the second chapter contains a summary of the derivation of basic equations with emphasis on boundary conditions prevailing at interfaces Chapter 3 is devoted to linear stability analyses and identification of basic instability modes The weakly nonlinear theories are presented in Chapter 4 monotonic instabilities Chapter 5 oscillatory instabilities and Chapter 6 multiple bifurcations Finally results on strongly nonlinear surface tension driven convection and transitions to interfacial turbulence are contained in Chapter 7

Explosive Boiling of Superheated Cryogenic Liquids Vladimir G. Baidakov, 2007-04-09 The monograph is devoted to the description of the kinetics of spontaneous boiling of superheated liquefied gases and their solutions Experimental results are given on the temperature of accessible superheating the limits of tensile strength of liquids due to processes of cavitation and the rates of nucleation of classical and quantum liquids The kinetics of evolution of the gas phase is studied in detail for solutions of cryogenic liquids and gas saturated fluids The properties of the critical clusters bubbles of critical sizes of the newly evolving gas phase are analyzed for initial states near the equilibrium coexistence curves of liquid and gas for states near the limits of accessible superheating and for initial states near the respective spinodal curves Finally processes of explosive boiling of cryogenic liquids are considered occurring as the result of outflow processes and intensive interactions with high temperature liquid samples

Chemoresponsive Materials Hans-Jörg Schneider, 2015-07-13 Smart materials stimulated by chemical or biological signals are of interest for their many applications including drug delivery as well as in new sensors and actuators for environmental monitoring process and food control and medicine In contrast to other books on responsive materials this volume concentrates on materials which are stimulated by chemical or biological signals Chemoresponsive Materials introduces the area with chapters covering different responsive material systems including hydrogels organogels membranes thin layers polymer brushes chemomechanical and imprinted polymers nanomaterials silica particles as well as carbohydrate and bio based systems Many promising applications are highlighted with an emphasis on drug delivery sensors and actuators With contributions from internationally known experts the book will appeal to graduate students and researchers in academia healthcare and industry interested in functional materials and their applications

Frontiers of Fundamental Physics B. G. Sidharth, Furio Honsell, Alessandro De Angelis, 2007-09-18 The Sixth International Symposium Frontiers of Fundamental and Computational Physics Udine Italy 26-29 September 2004 aimed at providing a platform for a wide range of physicists to meet and share thoughts on the latest trends in various mainly cross disciplinary research areas This includes the exploration of frontier lines in High Energy Physics Theoretical Physics Gravitation and Cosmology Astrophysics Condensed Matter Physics Fluid Mechanics Such

frontier lines were unified by the use of computers as an often primary research instruments or dealing with issues related to information theory The book contains contributions by Nobel Laureates Leon N Cooper 1972 and Gerard t Hooft 1999 and concludes with two interesting chapters on new approaches to Physics Teaching Audience Graduate students lecturers and researches in Physics

Physics of Wetting Edward Yu. Surface-tension-driven Coalescence Alice B. Thompson, 2012 When fluid droplets coalesce the flow is initially controlled by a balance between surface tension and viscosity For low viscosity fluids such as water the viscous lengthscale is quickly reached yielding a new balance between surface tension and inertia Numerical and asymptotic calculations have shown that there is no simply connected solution for the coalescence of inviscid fluid drops surrounded by a void as large amplitude capillary waves cause the free surface to pinch off We analyse in detail a linearised version of this free boundary problem For

zero density surrounding fluid we find asymptotic solutions to the leading order linear problem for small and large contact point displacement. In both cases this requires the solution of a mixed type boundary value problem via complex variable methods. For the large displacement solution we match this to a WKB analysis for capillary waves away from the contact point. The composite solution shows that the interface position becomes self intersecting for sufficiently large contact point displacement. We identify a distinguished density ratio for which flows in the coalescing drops and surrounding fluid are equally important in determining the interface shape. We find a large displacement solution to the leading order two fluid problem with a multiple scales analysis using a spectral method to solve the leading order periodic oscillator problem for capillary waves. This is matched to a single parameter inner problem which we solve numerically to obtain the correct boundary conditions for the secularity equations. We find that the composite solution for the two fluid problem is simply connected for arbitrarily large contact point displacement and so zero density surrounding fluid is a singular limit.
