On a Farther Shore William Souder, 2013-09-03 A New York Times Notable Book of 2012 Rachel Carson loved the ocean and wrote three books about its mysteries. But it was with her fourth book *Silent Spring* that this unassuming biologist transformed our relationship with the natural world. *Silent Spring* was a chilling indictment of DDT and other pesticides that until then had been hailed as safe and wondrously effective. It was Carson who sifted through all the evidence documenting with alarming clarity the collateral damage to fish, birds, and other wildlife, revealing the effects of these new chemicals to be lasting, widespread, and lethal. *Silent Spring* shocked the public and forced the government to take action despite a withering attack on Carson from the chemicals industry. It awakened the world to the heedless contamination of the environment and eventually led to the establishment of the EPA and to the banning of DDT. By drawing frightening parallels between dangerous chemicals and the then pervasive fallout from nuclear testing, Carson opened a fault line between the gentle ideal of conservation and the more urgent new concept of environmentalism. Elegantly written and meticulously researched, *On a Farther Shore* reveals a shy yet passionate woman more at home in the natural world than in the literary one that embraced her. William Souder also writes sensitively of Carson's romantic friendship with Dorothy Freeman and of Carson's death from cancer in 1964. This extraordinary new biography captures the essence of one of the great reformers of the twentieth century.

Oceanography: An Invitation to Marine Science Tom S. Garrison, 2015-01-01 Developed in partnership with the National Geographic Society, market leading OCEANOGRAPHY: AN INVITATION TO MARINE SCIENCE 9e equips students with a basic understanding of the scientific questions, complexities, and uncertainties involved in ocean use, as well as the role and importance of the ocean in nurturing and sustaining life on Earth. The Ninth Edition features the work of seasoned author and educator Tom Garrison along with new co-author Robert Ellis, an assistant professor in the Marine Science Department at Orange Coast College who has managed research projects and educational programs throughout the world. Offering an even stronger emphasis on the science process, the new edition includes more "How Do We Know?" boxes detailing the science behind how oceanographers know what they know. Coverage of climate change has been updated to reflect the latest findings. In addition, Chapter 14 has been renamed Primary Producers and now includes expanded coverage of photosynthetic and chemosynthetic producers to help students understand the big picture in marine biology.
