Lisa-ann Gershwin, 2014-09-25 Our oceans are becoming increasingly inhospitable to life growing toxicity and rising temperatures coupled with overfishing have led many marine species to the brink of collapse And yet there is one creature that is thriving in this seasick environment the beautiful dangerous and now incredibly numerous jellyfish As foremost jellyfish expert Lisa ann Gershwin describes in *Stung* the jellyfish population bloom is highly indicative of the tragic state of the world's ocean waters while also revealing the incredible tenacity of these remarkable creatures Recent documentaries about swarms of giant jellyfish invading Japanese fishing grounds and summertime headlines about armadas of stinging jellyfish in the Mediterranean and Chesapeake are only the beginning jellyfish are truly taking over the oceans Despite their often dazzling appearance jellyfish are simple creatures with simple needs namely fewer predators and competitors warmer waters to encourage rapid growth and more places for their larvae to settle and grow In general oceans that are less favorable to fish are more favorable to jellyfish and these are the very conditions that we are creating through mechanized trawling habitat degradation coastal construction pollution and climate change Despite their role as harbingers of marine destruction jellyfish are truly enthralling creatures in their own right and in *Stung* Gershwin tells stories of jellyfish both attractive and deadly while illuminating many interesting and unusual facts about their behaviors and environmental adaptations She takes readers back to the Proterozoic era when jellyfish were the top predator in the marine ecosystem at a time when there were no fish no mammals and no turtles and she explores the role jellies have as middlemen of destruction moving swiftly into vulnerable ecosystems The story of the jellyfish as Gershwin makes clear is also the story of the world's oceans and *Stung* provides a unique and urgent look at their inseparable histories and future
