

Nutrient Cycles

How are nutrients recycled through ecosystems?

Why?

We have learned the importance of recycling our trash. It allows us to use something again for another purpose and prevents the loss of natural resources. But what happens to the waste in nature? Why aren't we up to our necks in natural refuse? Why is there always a supply of water? Why is there oxygen to breathe and carbon dioxide for photosynthesis? Organic compounds in nature are also recycled. This recycling process converts the complex organic compounds to simple, inorganic compounds, which then can be returned to nature to be used again and again.

Model 1 – The Water Cycle

1. Model 1 illustrates how nature recycles what natural resource?
2. Model 1 illustrates four major areas of water storage on Earth. Complete the list of these storage areas below.
Atmosphere, surface water, _____, and _____.
3. Where is groundwater stored?
