The background of the entire cover is a vibrant blue with horizontal streaks of lighter and darker shades, creating a sense of motion and energy. Overlaid on this background are several white silhouettes of athletes in various dynamic poses: a runner in mid-stride at the top right, a baseball player swinging a bat on the left, a soccer player in the center, and a cyclist in the bottom right corner.

combining theory and practice Dietary Supplementation in Sport and Exercise Jay Hoffman, 2019-06-07 Dietary Supplementation in Sport and Exercise removes the myths associated with many dietary supplements. It provides an evidence-based approach to the physiological mechanisms related to popular supplements and examines the ergogenic benefits in both competitive and recreational athletes. This text covers a variety of supplements including vitamins and minerals, carbohydrates, protein, and amino acids, beta-alanine, creatine, and guanidinoacetic acid, caffeine, and probiotics, as well as emerging ergogenic aids. Information on dosage, ceiling effects, and washout periods is discussed along with safety and legality for different sporting organizations. The book also offers an insight into the efficacy of certain dietary supplements in unique populations like children and the elderly. Dietary Supplementation in Sport and Exercise is an important resource for advanced undergraduate and graduate students on exercise science, health, and nutrition courses, as well as strength coaches, athletic trainers, nutritionists, and personal trainers, and medical professionals who consult with patients on dietary supplementation.

Sports, Exercise, and Nutritional Genomics Debmalika Barh, Ildus I. Ahmetov, 2019-08-25 Sports, Exercise, and Nutritional Genomics: Current Status and Future Directions is the first reference volume to offer a holistic examination of omics-driven advances across different aspects of exercise and sports physiology, biochemistry, sports medicine, psychology, anthropology, and sports nutrition, and highlighting the opportunities towards advanced personalized training and athlete health management. More than 70 international experts from 14 countries have discussed key exercise and sport-related themes through the prism of genomics, epigenomics, transcriptomics, proteomics, metabolomics, telomere biology, talent in sport, individual differences in response to regular physical activity that in the future may empower coaches, sports physicians, fitness experts, genetic counselors, and translational scientists to employ various omics data and approaches in improving health and physical performance of people participating in sports and exercise activities. Contributors address current knowledge of genetic influence on athletic performance, individual responses to exercise training, as well as the genetics of musculoskeletal phenotypes, exercise-related injuries, flexibility, and neurodegenerative disorders in athletes. Finally, performance-related and psychological traits associated with epigenetic, transcriptomic, and metagenomic biomarkers are also considered along with nutritional and pharmacogenomic aids in sports medicine and personalized nutrition. Effectively synthesizes key themes across molecular aspects of exercise and sports sciences. Provides a knowledge base for future translation of omics solutions to talent identification, individualized training, and nutrition. Features contributions from international experts, researchers, and clinicians in the subject area.
