ways in which Appalachia often served as a laboratory for the exploration and practice of American conceptions of nature. The region operated alternately as frontier wilderness, rural hinterland, region of subsistence agriculture, bastion of yeoman farmers, and place to experiment with modernization. In these various takes on the southern mountains scattered across time and space, both mountain residents and outsiders consistently believed that the region's environment made Appalachia distinctive, for better or worse. With chapters dedicated to microhistories focused on particular commodities, Drew A. Swanson builds upon recent Appalachian studies scholarship, emphasizing the diversity of a region so long considered a homogenous backwater. While Appalachia has a recognizable and real coherence rooted in folkways, agriculture, and politics, among other things, it is also a region of varied environments, people, and histories. These discrete stories are, however, linked through the power of conceptualizing nature and work together to reveal the ways in which ideas and uses of nature often created a sense of identity in Appalachia. Delving into the environmental history of the region reveals that Appalachian environments, rather than separating the mountains from the broader world, often served to connect the region to outside places.

A Meeting of Land and Sea David R. Foster, 2017-01-01. An eminent ecologist shows how an iconic New England island has been shaped by nature and human history and how its beloved landscape can be protected. Full of surprises, bedecked with gorgeous photographs and maps, and supported by unprecedented historical and ecological research, this book awakens a new perspective on the renowned New England island, Martha's Vineyard. David Foster explores the powerful natural and cultural forces that have shaped the storied island to arrive at a new interpretation of the land today and a well-informed guide to its conservation in the future. Two decades of research by Foster and his colleagues at the Harvard Forest encompass the native people and prehistory of the Vineyard, climate change and coastal dynamics, colonial farming, and modern tourism, as well as land planning and conservation efforts. Each of these has helped shape the island of today, and each also illuminates possibilities for future caretakers of the island's ecology. Foster affirms that Martha's Vineyard is far more than just a haven for celebrities, presidents, and moguls; it is a special place with a remarkable history and a population with a proud legacy of caring for the land and its future.

Bears of the World Vincenzo Penteriani, Mario Melletti, 2020-11-26. Bears have fascinated people since ancient times. The relationship between bears and humans dates back thousands of years, during which time we have also competed with bears for shelter and food. In modern times, bears have come under pressure through encroachment on their habitats, climate change, and illegal trade in their body parts, including the Asian bear bile market. The IUCN lists six bears as vulnerable or endangered, and even the least concern species, such as the brown bear, are at risk of extirpation in certain countries. The poaching and international trade of these most threatened populations are prohibited but still ongoing. Covering all bear species worldwide, this beautifully illustrated volume brings together the contributions of 200 international bear experts on the ecology, conservation status, and management of the Ursidae family. It reveals the fascinating long history of interactions between humans and bears and the threats affecting

these charismatic species      *Seed Dispersal* Andrew J. Dennis, R.J. Green, E.W.
