More Than Nature Needs Language Mind And Evolution:

More than Nature Needs Derek Bickerton, 2014-01-13 How did humans acquire cognitive capacities far more powerful than any hunting and gathering primate needed to survive Alfred Russel Wallace co founder with Darwin of evolutionary theory set humans outside normal evolution Darwin thought use of language might have shaped our sophisticated brains but this remained an intriguing guess until now Combining state of the art research with forty years of writing and thinking about language origins Derek Bickerton convincingly resolves a crucial problem that biology and the cognitive sciences have systematically avoided Before language or advanced cognition could be born humans had to escape the prison of the here and now in which animal thinking and communication were both trapped Then the brain's self organization triggered by words assembled mechanisms that could link not only words but the concepts those words symbolized a process that had to be under conscious control Those mechanisms could be used equally for thinking and for talking but the skeletal structures they produced were suboptimal for the hearer and had to be elaborated Starting from humankind's remotest past *More than Nature Needs* transcends nativist thesis and empiricist antithesis by presenting a revolutionary synthesis that shows specifically and in a principled way how and why the synthesis came about *More than Nature Needs* Derek

Bickerton, 2014-01-13 How did humans acquire cognition more powerful than a hunting gathering primate needed to survive Combining state of the art research with forty years of writing about language evolution Derek Bickerton resolves a crucial problem that both biology and cognitive science have ignored how animal thinking escaped the prison of the here and now

Doc-Humanity Maurizio Ferraris,2022-09-12 However you view the present time it is a new century a new world and also a new humanity in fact humanity is not something that was ever defined once and for all but remains an open project For several decades we have been witnessing a revolution However unlike the political and ideological revolutions that took place around the First World War this is a technological and much more radical one that does not depend on people s beliefs but rather on the tireless labour of machines The rise of automation has brought about a revelation of something that had hitherto remained hidden in the workshops of homo faber That is there are very few functions apart from consumption where a machine cannot replace a human being be these material or spiritual machines need energy but they can also do without it whereas humans die if deprived of it or one can imagine a machine producing symphonies but not enjoying them So while human beings are still needed their roles and scopes have to be reconsidered Workers may be superfluous but humans are still needed including those who until recently only recognised themselves as producers The exclusion of workers from production does not discount humans being able to produce value in the form of consumption Recognising this will enable us to conceive the Webfare a new digital system that will teach us to find new names and new forms more tolerance and room for traditional human needs Above all it will teach us how to transform the time given to us by automation into an opportunity for progress

Handbook of Cognitive Archaeology Tracy B. Henley, Matt J. Rossano, Edward P. Kardas, 2019-07-24 The remains that archaeologists uncover reveal ancient minds at work as much as ancient hands and for decades many have sought a better way of understanding those minds This understanding is at the forefront of cognitive archaeology a discipline that believes that a greater application of psychological theory to archaeology will further our understanding of the evolution of the human mind Bringing together a diverse range of experts including archaeologists psychologists anthropologists biologists psychiatrists neuroscientists historians and philosophers in one comprehensive volume this accessible and illuminating book is an important resource for students and researchers exploring how the application of cognitive archaeology can significantly and meaningfully deepen their knowledge of early and ancient humans This seminal volume opens the field of cognitive archaeology to scholars across the behavioral sciences

From Signal to Symbol Ronald Planer, Kim Sterelny, 2021-10-12 A novel account of the evolution of language and the cognitive capacities on which language depends In From Signal to Symbol Ronald Planer and Kim Sterelny propose a novel theory of language that modern language is the product of a long series of increasingly rich protolanguages evolving over the last two million years Arguing that language and cognition coevolved they give a central role to archaeological evidence and attempt to infer cognitive capacities on the basis of that evidence which they link in turn to communicative capacities Countering other accounts which move directly from archaeological traces to language Planer and Sterelny show that rudimentary forms of many of the elements on which language depends can be found in the great apes and were part of the equipment of the earliest species in our lineage After outlining the constraints a theory of the evolution of language should satisfy and filling in the details of their model they take up the evolution of words composite utterances and hierarchical structure They consider the transition from a predominantly gestural to a predominantly vocal form of language and discuss the economic and social factors that led to language Finally they evaluate their theory in terms of the constraints previously laid out

Language, Science, and Structure Ryan M. Nefdt, 2023 This work provides a new framework for understanding some of the most profound theories of human language Ryan M Nefdt touches on philosophical questions of what languages are how they evolved and what the science of language should be He takes insights and results from the natural and formal sciences and translates them into a new domain His book offers the reader new ways of appreciating how the most unique of human traits our ability to process and produce natural language has been and can be studied from a scientific point of view

Radu J. Bogdan,2021-06-10 This book explores the evolution of the mental competence for self reflection why it evolved under what selection pressures in what environments out of what precursors and with what mental resources Integrating evolutionary psychological and philosophical perspectives Radu J Bogdan argues that the competence for self reflection uniquely human and initially autobiographical evolved under strong and persistent sociocultural and political collaborative and competitive pressures on the developing minds of older children and later adults Self reflection originated in a basic propensity of the human brain to rehearse anticipatively mental states speech acts actions and states of the world in order to service one s elaborate goal policies These goal policies integrate offline representations of one s own mental states and actions and those of others in order to handle the challenges of a complex and dynamic sociopolitical and sociocultural life calling for an adaptive intramental self regulation that intramental adaptation is self reflection Wayfinding M. R. O'Connor,2024-03-26 In this marvel of storytelling a journalist pursues the mysteries of human navigation across continents and deep within the brain Kirkus Reviews starred review Biologists have been trying to solve the mystery of how organisms have the ability to migrate and orient with such precision especially since our own adventurous ancestors spread across the world without maps or instruments In Wayfinding M R O Connor goes to the Arctic the Australian bush and the South Pacific to talk to masters of their environment who seek to preserve their traditions at a time when anyone can use a GPS to navigate O Connor explores the neurological basis of spatial orientation within the brain and how exercising our cognitive mapping skills can improve the health of our hippocampus She also talks to scientists studying how atrophy in the hippocampus is associated with afflictions such as impaired memory dementia Alzheimer s Disease depression and PTSD Wayfinding is a captivating book that charts how our species profound capacity for exploration memory and storytelling results in topophilia the love of place

Language and Mathematics Marcel Danesi,2016-06-06 This book explores the many disciplinary and theoretical links between language linguistics and mathematics It examines trends in linguistics such as structuralism conceptual metaphor theory and other relevant theories to show that language and mathematics have a similar structure but differential functions even though one without the other would not exist
