Trigg, 1985 For the mathematics enthusiast of any age or level of sophistication this stimulating treasury of unusual math problems offers unlimited opportunity for mind boggling recreation Charles W. Trigg Dean Emeritus and Professor Emeritus at Los Angeles City College and one of the country's best known problemists has compiled nearly 300 mathematical brainteasers from the field of arithmetic algebra plane and solid geometry trigonometry number theory and such general recreational mathematics and dissections cryptarithms and magic squares The object of

each problem is to find the quickest most elegant solution they are often unorthodox and there is usually an element of surprise in each. Ranging from the simple to complex problems are both original with the author and the work of over 100 other qualified mathematicians. Most are rarely seen or entirely new all challenge the reader to devise solutions more elegant than the ones provided. *Mathematical Fun, Games and Puzzles* Jack Frohlichstein, 1962. Brush up on your math skills with fun games and puzzles. **Challenging Mathematical Teasers** James Alston Hope Hunter, 1980-01-01. 100 tough story teasers for the jaded. More difficult algebraically than typical puzzles and ideal for confirmed puzzle fanatic but appendices help less experienced. Step by step solutions to all 100 puzzles. Also 40 new alphametics solvable by simple arithmetic and logical reasoning with answers and two sample solutions. *Impossible Folding Puzzles and Other Mathematical Paradoxes* Gianni A. Sarcone, Marie-Jo Waeber, 2014-02-20. Do all problems have solutions? Is complexity synonymous with difficulty? This original collection of mathematical puzzles and paradoxes proves that things aren't always what they seem. Readers will discover that nothing is as easy or as difficult as it looks and that puzzles can have one, several or no solutions. The fun filled puzzles begin with The Tricky Hole a challenge that involves pushing a large coin through a small hole in a sheet of paper without ripping or making any cuts in the paper. Advance to the Elastic Playing Card in which it's possible to cut a hole into a playing card big enough for someone to climb through. Other incredible puzzles include Elephants and Castles, Trianglized Kangaroo, Honest Dice and Logic Dice. Mind reading Powers and dozens more. Complete solutions explain the mathematical realities behind the fantastic sounding challenges. **Mathematical Puzzling** A. Gardiner, 1999-01-01. Challenging and stimulating collection of diverting brainteasers helps high school students integrate simple techniques and complex strategies in an enjoyable way. A creative and challenging tool for developing problem solving techniques the puzzles involve squares and cubes, polyhedra, prime numbers, chess pieces and other interesting subjects. Includes suggested approaches, hints and solutions. *Mathematical Puzzles of Sam Loyd. Selected and Edited by Martin Gardner. (A Selection of Puzzles from Sam Loyd's Cyclopedia of Puzzles.) [With Illustrations.]* Samuel LOYD (the Younger.), Martin Gardner, 1959. **Games of No Chance** Richard J. Nowakowski, 1998-11-13. Is Nine Men Morris in the hands of perfect players a win for white or for black or a draw? Can king rook and knight always defeat king and two knights in chess? What can Go players learn from economists? What are nimbers, tinies, switches and minies? This book deals with combinatorial games that is games not involving chance or hidden information. Their study is at once old and young though some games such as chess have been analyzed for centuries. The first full analysis of a nontrivial combinatorial game Nim only appeared in 1902. The first part of this book will be accessible to anyone regardless of background it contains introductory expositions, reports of unusual tournaments and a fascinating article by John H Conway on the possibly everlasting contest between an angel and a devil. For those who want to delve more deeply the book also contains combinatorial studies of chess and Go, reports on computer advances such as the solution of Nine Men Morris and Pentominoes and theoretical approaches to such problems as games.
