Introduction to PCM Telemetering Systems Stephen Horan, 2018-10-03 Telemetering systems and applications have moved far beyond the space flight telemetry most people have heard of to cutting edge uses across a broad range of disciplines including industry medicine and meteorology To fully understand and participate in the acquisition of data this technology makes possible scientists in these fields along with engineers new to telemetering require some background in the concepts hardware and software that makes the technology so valuable Introduction to PCM Telemetering Systems Second Edition summarizes the techniques and terminology used in sending data and control information between users and the instruments that collect and process the data It gives an overall systems introduction to the relevant topics in three primary areas system interfaces data transport timing and synchronization and data transmission techniques The topics addressed include sensor characteristics user interface design data filtering data framing statistical analysis telemetry standards time code standards modulation techniques and radio propagation To reinforce understanding each chapter includes exercises Rather than focusing on design specifics which can change so rapidly with evolving technologies the author centers his discussions on concepts and standards This edition incorporates the latest standards LabVIEW based examples of telemetry and command processing and simulations using multiSim and Commsim

Kinetics of Crude-oil Combustion in Porous Media Interpreted Using Isoconversional Methods Murat Cinar, 2011 One method to access unconventional heavy oil and natural bitumen resources as well as waterflood residual oil is to apply in situ combustion ISC to oxidize in place a small fraction of the hydrocarbon thereby providing heat to reduce oil viscosity and pressure that enhances recovery ISC is also attractive because it provides the opportunity to upgrade oil in situ by increasing the API gravity and decreasing for instance sulfur content Experimental analysis of crude oil oxidation kinetics provides parameters such as activation energy for modeling and optimization of ISC processes The complex nature of petroleum as a

multi component mixture and multi step character of oxidation reactions complicates substantially the kinetic analysis of crude oil Isoconversional techniques provide model free methods for estimating activation energy and naturally deconvolve multi step reactions In addition isoconversional methods are also useful as a screening tool to recognize the burning characteristics of different oils By using experimentally determined combustion kinetics of different oil samples along with combustion tube results we show that isoconversional analysis of ramped temperature oxidation data is useful to predict combustion front propagation It also provides new insight into the nature of the reactions occurring during ISC Ramped temperature oxidation RTO tests with effluent gas analysis are conducted to probe ISC reaction kinetics along with isothermal coke formation experiments The role of oxygen during coke formation reactions i e fuel formation for ISC is investigated using X ray photoelectron spectroscopy XPS of intermediate reaction products The XPS data is analyzed along with companion RTO experiments to obtain a simplified multi step reaction scheme Synthetic cases illustrate the connection between a proposed reaction scheme for oil matrix pairs and one dimensional combustion front propagation Analysis of experimental results illustrate that the reaction scheme is capable of reproducing experimental results including the basic trends in oxygen consumption and carbon oxides production for RTO experiments as a function of heating rate for both good and poor ISC candidates The combination of XPS and RTO studies indicates that the quality or reactivity of coke formed during the process is a function of oxygen presence absence

Floods and Landslides: Integrated Risk Assessment

Riccardo Casale, Claudio Margottini, 1999 This book reviews the state of the art of natural disasters like floods and landslides highlighting the possibility of safe and correct land planning and management by means of a global approach to territory In fact the events deriving from slope dynamics gravitational phenomena and fluvial dynamics floods are commonly triggered by the same factor heavy rainfall occur at the same time and are closely related For this reason this book analyses floods and slope stability phenomena as different aspects of the same dynamic system the drainage basin
