Metallic Materials Wit Grzesik, 2008-01-22 Advanced Machining Processes of Metallic Materials updates our knowledge on the metal cutting processes in relation to theory and industrial practice. In particular, many topics reflect recent developments: e.g. modern tool materials, computational machining, computer simulation of various process phenomena, chip control, monitoring of the cutting state, progressive and hybrid machining operations, and generation and modelling of surface integrity. This book addresses the present state and future development of machining technologies. It provides a comprehensive description of metal cutting theory, experimental and modelling techniques, along with basic machining processes and their effective use in a wide range of manufacturing applications. Topics covered include fundamental physical phenomena and methods for their evaluation, available technology of machining processes for specific classes of materials, and surface integrity. The book also provides strategies for optimization techniques and assessment of machinability. Moreover, it describes topics not currently covered in other sources, such as high performance and multitasking, complete machining with a high potential for increasing productivity, and virtual and e machining. The research covered here has contributed to a more generalized vision of machining technology, including not only traditional manufacturing tasks but also new potential emerging applications, such as micro and nanotechnology. Many practical examples of modern machining technology are applicable for various technical engineering and scientific levels. Collects together 20 years of research in the field and related technical information. **Ecology and Animal Health** Jeffrey M. Levenson, Leif Norrgren, 2012-10-28

**New Technologies and Work** Arthur Francis, Peter Grootings, 2018-03-26 Originally published in 1989, this book is a valuable contribution to the development of a non-technological approach in the study of technology and work. The studies compare the introduction and implementation of new technology at work in similar enterprises throughout Europe. The contributors share the basic assumption that the impact of technology varies greatly according to the characteristics of the country and its socioeconomic system. They view changes in work as the result of the complex combinations and interactions of such conditions and technology, rather than of technology per se, and their focus is therefore on the mechanisms and processes which come into play when new technology is being introduced. The book's international scope makes it a rich empirical source of comparative material. **Materials Selection in Mechanical Design** Michael F. Ashby, 2010-10-29
