*General Index to Sidereal Messenger*, 1909      *Popular Astronomy*, 1909      *Variational Problems in Topology* A.T. Fomenko, 2019-06-21 Many of the modern variational problems of topology arise in different but overlapping fields of scientific study mechanics physics and mathematics In this work Professor Fomenko offers a concise and clear explanation of some of these problems both solved and unsolved using current methods of analytical topology His book falls into three interrelated sections The first gives an elementary introduction to some of the most important concepts of topology used in modern physics and mechanics homology and cohomology and fibration The second investigates the significant role of Morse theory in modern aspects of the topology of smooth manifolds particularly those of three and four dimensions The third discusses minimal surfaces and harmonic mappings and presents a number of classic physical experiments that lie at the foundations of modern understanding of multidimensional variational calculus The author's skilful exposition of these topics and his own graphic illustrations give an unusual motivation to the theory expounded and his work is recommended reading for specialists and non specialists alike involved in the fields of physics and mathematics at both undergraduate and graduate levels

*Real Homotopy of Configuration Spaces* Najib Idrissi, 2022-06-11 This volume provides a unified and accessible account of recent developments regarding the real homotopy type of configuration spaces of manifolds Configuration spaces consist of collections of pairwise distinct points in a given manifold the study of which is a classical topic in algebraic topology One of this theory's most important questions concerns homotopy invariance if a manifold can be continuously deformed into another one then can the configuration spaces of the first manifold be continuously deformed into the configuration spaces of the second This conjecture remains open for simply connected closed manifolds Here it is proved in characteristic zero i.e. restricted to algebrotopological invariants with real coefficients using ideas from the theory of operads A generalization to manifolds with boundary is then considered Based on the work of Campos Ducoulombier Lambrechts Willwacher and the author the book covers a vast array of topics including rational homotopy theory compactifications PA forms propagators Kontsevich integrals and graph complexes and will be of interest to a wide audience
