Metaphysical Grounding Understanding The Structure Of Reality By 2014 11 06:

The Routledge Handbook of Metaphysical Grounding Michael Raven, 2020-05-04 Some of philosophy's biggest questions both historically and today are in virtue of questions In virtue of what is an action right or wrong In virtue of what am I the same person my mother bore In virtue of what is an artwork beautiful Philosophers attempt to answer many of these types of in virtue of questions but philosophers are also increasingly focusing on what an in virtue of question is in the first place Many assume at least as a working hypothesis that in virtue of questions involve a distinctively metaphysical kind of determinative explanation called ground This Handbook surveys the state of the art on ground as well as its connections and applications to other topics The central issues of ground are discussed in 37 chapters all written exclusively for this volume by a wide range of leading experts The chapters are organized into the following sections I History II Explanation and Determination III Logic and Structure IV Connections V Applications Introductions at the start of each section provide an overview of the section's contents and a list of Related Topics at the end of each chapter points readers to other germane areas throughout the volume The resulting volume is accessible enough for advanced students and informative enough for researchers It is essential reading for anyone hoping to get clearer on what the biggest questions of philosophy are really asking

Reality and Its Structure Ricki Bliss, Graham Priest, 2018 Reality is a rather large place It contains protons economies headaches sentences smiles asteroids crimes numbers and very many other things Much of the content of our reality appears to depend on other of its content Economies for example appear to depend upon people and the way they behave amongst other things Some of the content of our reality also appears to be in some significant sense more important than other of its content Whilst none of us would wish to deny the very important role that economies play in our lives most of us would agree that without matter arranged certain ways in space for example there could be no economies in the first place Very many contemporary philosophers are concerned with how exactly we are to fill in the details of this view What they are inclined to agree on is that reality has an over arching hierarchical structure ordered by relations of metaphysical dependence where chains of entities ordered by those dependence relations terminate in something fundamental It is also commonly taken for granted that what those dependence chains terminate in is merely contingently existent those things could have failed to exist and consistent they have no contradictory properties This volume brings together fifteen essays from leading and emerging scholars that address these core yet often under explored commitments

A Trinitarian Theology of Nature Lisanne Winslow,2020-03-20 In its attempt to ascertain the mechanisms of nature contemporary science seems to be generating unanswerable questions One way forward might be by appealing to a theistic metaphysics of the fundamental workings in natural science Moving beyond Barth s objection to natural theology this work arrives at some of Emil Brunner s exegetical insights indicating that nature is divine communication This communication and revelation is understood through natural types or onto types building upon the insights of Jonathan Edwards Edwards proposed messages in nature as a language of God intending to convey spiritual biblical and theological messages to the creature as part of God s end in creating Edwards s insights are brought forth to determine the usefulness of his typological method all the way down to cellular and molecular mechanisms Edwards also proposed that God s acting in nature reflects the Trinitarian God of the Christian faith Therefore a Trinitarian theology of Nature composing a Theo logy of Nature a Christology of Nature and a Pneumatology of Nature explores how each divine person of the Godhead acts in perichoretic unity in the world we encounter God s Trinitarian powerful and magnificent glory is not merely displayed by what has been made but is also intimately shared in a gospel of nature

Mental Action and the Conscious Mind Michael Brent,Lisa Miracchi Titus,2022-07-15 Mental action deserves a place among foundational topics in action theory and philosophy of mind Recent accounts of human agency tend to overlook the role of conscious mental action in our daily lives while contemporary accounts of the conscious mind often ignore the role of mental action and agency in shaping consciousness This collection aims to establish the centrality of mental action for discussions of agency and mind The thirteen original essays provide a wide ranging vision of the various and nuanced philosophical issues at stake Among the questions explored by the contributors are Which aspects of our conscious mental lives are agential Can mental action be reduced to and explained in terms of non agential mental states processes or events Must mental action be included among the ontological categories required for understanding and explaining the conscious mind more generally Does mental action have implications for related topics such as attention self knowledge self control or the mind body problem By investigating the nature scope and explanation of mental action the essays presented here aim to demonstrate the significance of conscious mental action for discussions of agency and mind Mental Action and the Conscious Mind will be of interest to scholars and graduate students working in philosophy of mind philosophy of action and philosophy of agency as well as to philosophically inclined cognitive scientists

Is There a God? Graham Oppy,Kenneth L. Pearce,2021-10-12 Bertrand Russell famously quipped that he didn t believe in God for the same reason that he didn t believe in a teapot in orbit between the earth and Mars it is a bizarre assertion for which no evidence can be provided Is belief in God really like belief in Russell s teapot Kenneth L Pearce argues that God is no teapot God is a real answer to the deepest question of all why is there something rather than nothing Graham Oppy argues that we should believe that there are none but natural causal entities with none but natural causal properties

and hence should believe that there are no gods Beginning from this basic disagreement the authors proceed to discuss and debate a wide range of philosophical questions including questions about explanation necessity rationality religious experience mathematical objects the foundations of ethics and the methodology of philosophy Each author first presents his own side and then they interact through two rounds of objections and replies Pedagogical features include standard form arguments section summaries bolded key terms and principles a glossary and annotated reading lists In the volume foreword Helen De Cruz calls the debate both edifying and a joy and sums up what is at stake Here you have two carefully formulated positive proposals for worldviews that explain all that is classical theism or naturalistic atheism You can follow along with the authors and deliberate which one do you find more plausible Though written with beginning students in mind this debate will be of interest to philosophers at all levels and to anyone who values careful rational thought about the nature of reality and our place in it

A Metaphysics of Platonic Universals and their Instantiations José Tomás Alvarado, 2020-10-27 This book offers a detailed defense of a metaphysics of Platonic universals and a conception of particular objects that is coherent with said metaphysics The work discusses all the main alternatives in metaphysics of properties and tries to show why universals are the entities that best satisfy the theoretical roles required for a property The work also explains the advantages of Platonic over Aristotelian universals in the metaphysics of modality and natural laws Moreover it is argued that only Platonic universals are coherent with the grounding profile required for universals The traditional objections against Platonism are discussed and answered The third part of the book finally offers a conception of particular objects as nuclear bundles of tropes that is coherent with the Platonic ontology of universals This book is of interest to anyone that wants to understand the current and intricate debate in metaphysics of properties and its incidence in many other areas in philosophy

Prospects for Regional Integration in Africa Andreas Freytag, Abena D. Oduro, African integration has had a long history dating back to the end of colonization in the 1960s It has generated enormous interest in recent years not least because the continent has recently taken some bold steps to integrate further such as the Tripartite Free Trade Area or the creation of the African Continental Free Trade Area AfCFTA With this book we offer an innovative perspective on African integration By inviting mostly young African scholars from different disciplines in the social sciences and humanities we make African voices audible and start a discussion of the African integration efforts from an African perspective using novel criteria to judge different African integration attempts In addition to the younger generation's representatives we also invited scholars from Europe and Latin America to bring other continents perspectives to the fore

The Foundation of Reality David Glick, George Darby, Anna Marmodoro, 2020-04-29

Are space and time fundamental features of our world or might they emerge from something else The Foundation of Reality brings together metaphysicians and philosophers of physics working on space time and fundamentality to address this timely question Recent developments in the interpretation of quantum mechanics and the understanding of certain approaches to quantum gravity have led philosophers of physics to propose that space and time might be emergent rather than fundamental But such discussions are often conducted without engagement with those working on fundamentality and related issues in contemporary metaphysics This book aims to correct this oversight The diverse contributions to this volume address topics including the nature of fundamentality the relation of space and time to quantum entanglement and space and time in theories of quantum gravity Only through consideration of a range of different approaches to the topic can we hope to get clear on the status of space and time in our contemporary understanding of physical reality

The Tools of Metaphysics and the Metaphysics of Science Theodore Sider, 2020-02-19 Metaphysics is sensitive to the conceptual tools we choose to articulate metaphysical problems Those tools are a lens through which we view metaphysical problems and the same problems will look different when we change the lens In this book Theodore Sider identifies how the shift from modal to postmodal conceptual tools in recent years has affected the metaphysics of science and mathematics He highlights for instance how the increased consideration of concepts of ground essence and fundamentality has transformed the debate over structuralism in many ways Sider then examines three structuralist positions through a postmodal lens First nomic essentialism which says that scientific properties are secondary and lawlike relationships among them are primary Second structuralism about individuals a general position of which mathematical structuralism and structural realism are instances which says that scientific and mathematical objects are secondary and the pattern of relations among them is primary And third comparativism about quantities which says that particular values of scientific quantities such as having exactly 1000g mass are secondary and quantitative relations such as being twice as massive as are primary Sider concludes these discussions by considering the meta question of when theories are equivalent and how that impacts the debate over structuralism

Perspectives on Causation Elitzur A. Bar-Asher Siegal, Nora Boneh, 2020-07-27 This book explores relationships and maps out intersections between discussions on causation in three scientific disciplines linguistics philosophy and psychology The book is organized in five thematic parts investigating connections between philosophical and linguistic studies of causation presenting novel methodologies for studying the representation of causation tackling central issues in syntactic and semantic representation of causal relations and introducing recent advances in philosophical thinking on causation Beyond its thematic organization readers will find several recurring topics throughout this book such as the attempt to reduce causality to other non causal terms causal pluralism vs one all encompassing account for causation causal relations pertaining to the mental as opposed to the physical realm and more This collection also lays the foundation for questioning whether it is possible to evaluate available philosophical approaches to causation against the variety of linguistic

phenomena ranging across diverse lexical and grammatical items such as bound morphemes prepositions connectives and verbs Above all it lays the groundwork for considering whether the fruits of the psychological cognitive study of the perception of causal relations may contribute to linguistic and philosophical studies and whether insights from linguistics can benefit the other two disciplines *Robust Ethics* Erik J. Wielenberg,2014-09-25 Erik J Wielenberg draws on recent work in analytic philosophy and empirical moral psychology to defend non theistic robust normative realism and develop an empirically grounded account of human moral knowledge Non theistic robust normative realism has it that there are objective non natural sui generis ethical features of the universe that do not depend on God for their existence The early chapters of the book address various challenges to the intelligibility and plausibility of the claim that irreducible ethical features of things supervene on their non ethical features as well as challenges from defenders of theistic ethics who argue that objective morality requires a theistic foundation Later chapters develop an account of moral knowledge and answer various recent purported debunkings of morality including those based on scientific research into the nature of the proximate causes of human moral beliefs as well as those based on proposed evolutionary explanations of our moral beliefs
