Mellema,2004-01-01 Moral expectation is a concept with which all of us are well acquainted Already as children we learn that certain courses of action are expected of us We are expected to perform certain actions and we are expected to refrain from other actions Furthermore we learn that something is morally wrong with the failure to do what we are morally expected to do A central theme of this book is that moral expectation should not be confused with moral obligation While we are morally expected to do everything we are obligated to do a person can be morally expected to do some things that he or she is not morally obligated to do Although moral expectation is a familiar notion it has not been the object of investigation in its own right In the early chapters Mellema attempts to provide a philosophical account of this familiar notion distinguish it from other types of expectations and show how it is possible to form false moral expectations Subsequent chapters explore the role of moral expectation in agreements between people analyze ways that people avoid moral expectation illustrate how groups can have moral expectations and view moral expectation in the context of our relationship with divine beings The final chapter provides insight into how moral expectation operates in people s professional lives **Putting Peace into Practice** ,2022-06-08 This book examines the role and limits of policies in shaping attitudes and actions toward war violence and peace Authors examine militaristic language and metaphor effects of media violence on children humanitarian intervention sanctions peacemaking sex offender

Matter, Mind, and Medicine Jacques Kriegl, 2021-12-06 This book critically assesses the implications of modern medicine's claim to be a natural science Medicine models its scientific and clinical self understanding on an obsolete positivist conception of science reality and consciousness In this view the body is modeled as a biological machine disease as breakdown of the machine and therapy as physical measures to fix the machine The problems besetting medical science and practice are rooted in the inadequacy of the positivist philosophical assumptions regarding the nature of science reality and consciousness To base the diagnostic practices and therapeutic regimes purely on knowledge of physical processes in the human body is in view of this analysis at best grossly inadequate at worst thoroughly dehumanizing Anton van Niekerk Editorial Foreword This means that medicine's clinical method cannot be transformed without transforming the underlying view of science of reality and of the human person The book proposes a broader model of science which overcomes the outdated dichotomy between human and natural sciences Science is viewed as an interdisciplinary exercise generating multiple perspectives The insights of the human

sciences are essential for scientific clinical medicine Utilizing evolutionary biology and complexity theory the author proposes an alternative understanding of reality and human consciousness as a basis for a transformed clinical method Reality is a hierarchy of systems of increasing complexity Different levels can be distinguished namely material systems living material systems conscious living material systems and self conscious living material systems Each level represents a new manner of being which requires a different scientific discourse of understanding Using this model of reality the author argues against understanding human consciousness as a byproduct of physical processes in the brain The human person is a self conscious complex psycho somatic system whose well being is conditioned by much more than physical processes **Life, Death, and**
