Conserving Plant Genetic Diversity in Protected Areas José María Iriando, Nigel Maxted, Mohammad Ehsan Dulloo, 2008 Conservation in protected areas has focused on preserving biodiversity of ecosystems and species whereas conserving the genetic diversity contained within species has historically often been ignored. However, maintaining genetic diversity is fundamental to food security and the provision of raw materials and it is best preserved within plants' natural habitats. This is particularly true for wild plants that are directly related to crop species and can play a key role in providing beneficial traits such as pest or disease resistance and yield improvement. These wild relatives are presently threatened due to processes of habitat destruction and change and methodologies have been adapted to provide in situ conservation through the establishment of genetic reserves within the existing network of protected areas. Providing a long awaited synthesis of these new methodologies, this book presents a practical set of management guidelines that can be used for the conservation of plant genetic diversity of crop wild relatives in protected areas.

Functional

Ecology and

Management of Giant Hogweed (*Heracleum Mantegazzianum*) M. Cock, W. Nentwig, H.P. Ravn, M. Wade, 2007 The Giant Hogweed *Heracleum mantegazzianum* is a pernicious invasive species with significant impact on human health due to its phytotoxic sap. From its native area the Caucasus it has spread across Europe creating serious environmental and health problems. This book the output of a three year EU project involving 40 European experts is an authoritative compendium of current knowledge on this amazing invasive plant and will facilitate improved management. It is an invaluable resource for both practitioner and student and covers topics including taxonomy, genetics, reproduction, population ecology and invasion dynamics. It also reviews the possibilities of mechanical, chemical and biological control.

Guide to Information Sources in the Botanical Sciences Elisabeth B. Davis, Diane Schmidt, 1995-12-15 Works cited in this useful survey are appropriate for students, librarians and amateur and professional botanists. These encompass the plant kingdom in all its divisions and aspects except those of agriculture, horticulture and gardening. The majority of the annotations are for currently available in print or electronic reference works. A comprehensive author title and a separate subject index make locating specific entries simple. With materials ranging from those selected for the informed layperson to those for the specialist, this new edition reflects the momentous transition from print to electronic information resources. It is an appropriate purchase for public, college, university and professional libraries.

Using the Biological Literature Diane Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles, genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries.

Using the Biological Literature Handbook of Photosynthesis, Second Edition Mohammad Pessarakli, 1996-09-09 Details all of the photosynthetic factors and processes under both normal and stressful conditions covering lower and higher plants as well as related biochemistry and plant molecular biology. Contains authoritative contributions from over 125 experts in the field from 28 countries and includes almost 500 drawings, photographs, micrographs, tables and equations reinforcing and clarifying important text material.

The Ecology of Seeds Michael Fenner, Ken Thompson, 2005-02-24 What determines the number and size of the seeds produced by a plant? How often should it reproduce them? How often should a plant produce them? Why and how are seeds dispersed and what are the implications for the diversity and composition of vegetation? These are just some of the questions tackled in this wide ranging review of the role of seeds in the ecology of plants. The authors bring together information on the ecological aspects of seed biology starting with a consideration of reproductive strategies in seed plants and progressing through the life cycle covering seed maturation, dispersal, storage in the soil, dormancy, germination, seedling establishment and regeneration in the field. The text encompasses a wide range of concepts of general relevance to plant ecology reflecting the central role that the study of seed ecology has played in elucidating many fundamental aspects of plant community function.
