In the e learning domain the learning resources teachers and learners and the active learning processes in their entirety construct the learning ecosystems. This thesis examines the modelling of learning ecosystems to support their aggregation and reuse. To achieve this goal learning ecosystem models must support aggregation compatibility interoperability and granular re usability of their data. Through user studies digital model concepts of learning ecosystems i.e. so called LOOCs linked open online courses were developed. In particular Semantic Web technologies and Linked Data concepts are considered within the context. The developed ontological models form the basis for a number of e learning applications that show the viability of the concepts as well as a high user acceptance. Further a formal interpreter model for CSCL Computer Supported Collaborative Learning Scripts for the description of learning processes specified by using Abstract State Machines is presented.

*Collaborative Annotation for Reliable Natural Language Processing* Karën Fort, 2016-06-14. This book presents a unique opportunity for constructing a consistent image of collaborative manual annotation for Natural Language Processing. NLP has witnessed two major evolutions in the past 25 years: firstly, the extraordinary success of machine learning, which is now, for better or for worse, overwhelmingly dominant in the field; and secondly, the multiplication of evaluation campaigns or shared tasks. Both involve manually annotated corpora for the training and evaluation of the systems. These corpora have progressively become the hidden pillars of our domain, providing food for our hungry machine learning algorithms and reference for evaluation. Annotation is now the place where linguistics hides in NLP. However, manual annotation has largely been ignored for some time, and it has taken a while even for annotation guidelines to be recognized as essential. Although some efforts have been made lately to address some of the issues presented by manual annotation, there has still been little research done on the subject. This book aims to provide some useful insights into the subject. Manual corpus annotation is now at the heart of NLP and is still largely unexplored. There is a need for manual annotation engineering in the sense of a precisely formalized process, and this book aims to provide a first step towards a holistic methodology with a global view on annotation.
