Whitaker's Books in Print ,1998 *Chemical Abstracts* ,2002 Evaluation of (the Intrinsic Conducting Polymer) Polyaniline as a Corrosion Inhibitor on (aircraft Grade) Aluminum Alloys Matthew Shannon Pittman,2000 Interest is growing in potential applications of intrinsically conducting polymers ICPs Polyaniline is one of the most interesting due to its unique properties and high thermal stability One of the applications identified for polyaniline is its use as a corrosion inhibitor on metals This study evaluates the use of Panda commercial polyaniline obtained from Monsanto as well as Nitto commercial polyaniline obtained from Japanese based company Nitto as a corrosion inhibitor on aircraft grade aluminum Testing was performed in neutral salt spray following ASTM American standard testing methods B117 Good corrosion protection was observed with formulations involving sebacic acid and a University of Missouri Rolla E coat which combined to give an ASTM rating of 9 for corrosion resistance Abstract page iii **Corrosion and Protection of Marine Engineering Materials** Yanhua LEI,2023-05-12 This book provides a basic introduction to the application of conductive polymers in corrosion protection especially for marine environment corrosion protection research Conventional anticorrosive coatings which are based on heavy metals such as chromium zinc and copper are toxic to the environment There has been a need to find suitable replacement coatings that are environmentally friendly as well as effective in inhibiting the corrosion of steel Conductive polymers have garnered much attention in recent years due to their environmentally benign nature and high effectiveness in

protecting against corrosion This book introduces the history of these conductive polymers The applications of conducting polymers polymer composites and nanocomposites for corrosion protection of different industrial metal substrates are explored based on reported experimental data and their mechanism of inhibition is explained This book also includes overviews of some recent works on marine antifouling marine heavy protective coatings and waterborne paints by conducting polymer and inorganic composites Conducting polymers and their family of stimuli actuated polymers exhibit excellent application prospects in the fields of anticorrosion antibacterial antibiofouling and waterborne based coatings This book will be of great interest to students scholars and professionals alike in the field of corrosion engineering and material science

Corrosion Protection of Steels by Coatings Containing Electrically Conductive Polymers Wei-Kang Lu,1996 The anti corrosion performance of conducting polymers coated on the mild steel and stainless steel samples which exposed to artificial brine and dilute hydrochloric acid was investigated This work attempts to rationalize the observed corrosion processes in order to elucidate protection mechanisms from the view of a corrosion engineer A systematic correlation between the inhibition performance of electrically conducting polymers and its electronic molecular and electrochemical properties was also established Experiments were conducted to evaluate the electrochemical kinetic behavior of the oxidation of metal surfaces for the purpose of understanding the interfacial stability oxidation response and porous film diffusion phenomena of oxidation films on metal surface Several reaction models and revised corrosion principles are presented to discuss the protective properties of intrinsically conducting polymers from electrochemical macroscopic theories and microscopic molecular details
