Immunology, Inflammation and Diseases of the Eye Darlene A. Dartt, Reza Dana, Patricia D'Amore, Jerry Nieder Korn, 2011-02-26. This selection of articles from the Encyclopedia of the Eye provides a comprehensive overview of immunological features, diseases and inflammation of the eye and its support structures and organs. Rather than taking an immunological focus that is strictly suitable for clinicians, the volume offers a considerable basic science background and addresses a broad range of topics: the immune system of the eye, its various disorders, mechanisms of inflammation of the eye and visual system, treatment, wound healing mechanisms, stem cells and more. The first single volume to integrate comparative studies into a comprehensive resource on the neuroscience of ocular immunology. Chapters are carefully selected from the Encyclopedia of the Eye by the world's leading vision researchers. The best researchers in the field provide their conclusions in the context of the latest experimental results. Cornea and External Eye Disease Thomas Reinhard, Frank Larkin, D. F. P. Larkin, 2006. Essentials in Ophthalmology is a new review series covering all of ophthalmology, categorized in eight subspecialties. It will be published quarterly, thus each subspecialty will be reviewed biannually. Given the multiplicity of medical publications already available, why is a new series needed? Consider that the half life of medical knowledge is estimated to be around 5 years. Moreover, it can be as long as 8 years between the first description of a medical innovation in a peer reviewed scientific journal and publication in a medical textbook. A series that narrows this time span between journal and textbook would provide a more rapid and efficient transfer of medical knowledge into clinical practice and enhance care of our patients.
