Splintered Jonathan Butcher, 2022-03-22 The problem with our nation's schools today is not just the low test scores in basic reading and math which are an obstacle for the economy not to mention students' futures. The challenge is that K-12 instruction has been hijacked by Critical Theorists who are skeptical of representative government and the freedoms we cherish. The debates over the retelling of America's past on display in local school board meetings as well as conflicts between the New York Times 1619 Project and President Donald Trump's 1776 Commission involve not just historical facts but how Americans define their nation. This battle over our national identity is a cultural battle involving schools, cultural institutions, and the ideas we all need to share to get along with our neighbors, raise families, and pursue the American Dream. Jonathan Butcher is one of our sharpest and most insightful analysts writing about education today. The nation owes him a debt of gratitude for work demystifying an obscure academic field, critical race theory, and fearlessly following where it leads when imposed on our public schools, abandoning the cherished belief that education can be a means of uniting our diverse country and replacing it with a pedagogy of grievance and despair. Robert Pondiscio, Senior Fellow, American Enterprise Institute, and author of *How the Other Half Learns*. Jonathan Butcher's timely book on critical race theory addresses what I have described as the civil rights issue of our times. Too few Americans understand how this dangerous ideology and how it has seeped down into our K-12 educational system. Butcher's book is part of a collective effort to educate the American people about the infiltration and indoctrination of our educational system. Dr. Carol M. Swain, a former tenured professor at Vanderbilt and Princeton Universities. *Logic and Critical Thinking in the Biomedical Sciences* Jules J. Berman, 2020-07-03 Science is not a collection of facts. Science is the process by which we draw inferences from facts. Volume I of *Logic and Critical Thinking in the Biomedical Sciences* invites readers to linger over a collection of common observations to see what inferences can be drawn when one applies a bit of deductive logic. If we just think about what we observe, it is often possible to discover profound biomedical insights. Volumes 1 and 2 of *Logic and Critical Thinking in the Biomedical Sciences* are written for biomedical scientists and college-level students engaged in any of the life sciences, including bioinformatics and related data sciences. Provides a strong introduction to deductive methods that can be directly applied to the biomedical sciences. Using hundreds of examples, shows how creative scientists draw important inferences from observations that are often ignored by their peers. Discusses complex biological and medical concepts in a relaxed manner intended to focus the reader's attention on the deductive process without dwelling excessively on details. *Frank Leslie's Illustrated Newspaper* John Albert Sleicher, 1901 **The Engineer**, 1917 **Printers' Ink Monthly**, 1925 *Frank Leslie's Illustrated Newspaper*, 1901 Youth's Companion, 1918 The Congressional Globe United States Congress, 1836 **Congressional Record**, 1886 **Congressional Record** United States Congress, 1886 The Builder, 1866 *Outlook* Alfred Emanuel Smith, Francis Walton, 1875 **The ^AOxford Companion to the Supreme Court of the**
