Snow Job? Kevin Jack Riley, Cocaine has had a long and prominent position in the history of American substance abuse As far back as the late 1800s cocaine was commonly found in patent medicines elixirs and astonishingly in the earliest versions of Coca Cola Eventually the potency of cocaine was recognized and its purveyors came under gradual regulation Events in the early 1900s kept cocaine use down until World War II but the extensive drug use of the 1960s once again sparked a national temperance movement Created in 1989 the Office of National Drug Control Policy maintains responsibility for coordinating and monitoring the nation's counternarcotics policy But responsibility for coordination and monitoring is not the same thing as control In *Snow Job* Kevin Jack Riley examines source country control policies policies intended to control the production and export of cocaine from Latin America and their limitations Part I draws together drug use drug production and drug control policies in an analytic framework It goes on to examine the recent history of U.S. drug control policies source country control policies the ways in which cocaine prices affect cocaine use how cocaine is made and the vulnerable points in its production Part II examines the economic effects that production and controls exert on the sources of cocaine Bolivia and Peru and probes the Colombian drug lord connection Part III prescribes an appropriate path for source country cocaine policies and examines their implications for two other widely smuggled drugs heroin and marijuana Riley disagrees with analysts who

believe that source country control policies can lead to permanent victory in the war against cocaine because of the potentially high costs associated with implementing source country control policies on a large scale. He suggests a better strategy would be one that recognizes the severe limits facing interdiction eradication and other source country policies and instead focuses on directing source country resources where they will be most useful. This necessitates defining a regional strategy that elevates political stability and institution building and demotes traditional counternarcotics objectives. Snow Job offers original thinking and practical approaches to a multidimensional world problem and will be of interest to policymakers, political scientists, sociologists, and law enforcement officials.

Domestic Engineering and the Journal of Mechanical Contracting, 1921 Oral Literacies Sam Duncan, 2020-12-23

This is the first book to focus exclusively on an examination of early 21st century adult reading aloud. The dominant contemporary image of reading in much of the world is that of a silent solitary activity. This book challenges this dominant discourse, acknowledging the diversity of reading practices that adults perform or experience in different communities, languages, contexts, and phases of our lives, outlining potential educational implications and next steps for literacy teaching and research. By documenting and analysing the diversity of oral reading practices that adults take part in, on and offline, this book explores contemporary reading aloud as hugely varied, often invisible, and yet quietly ubiquitous. Duncan discusses questions such as: What, where, how, and why do adults read aloud or listen to others reading? How do couples, families, and groups use oral reading as a way of being together? When and why do adults read aloud at work? And why do some people read aloud in languages they may not speak or understand? This book is key reading for advanced students, researchers, and scholars of literacy practices and literacy education within education, applied linguistics, and related areas.

Load Balancing: An Automated Learning Approach Pankaj Mehra, Benjamin W Wah, 1995-04-26. This book presents a system that learns new load indices and tunes the parameters of given migration policies. The key component is a dynamic workload generator that allows off-line measurement of task completion times under a wide variety of precisely controlled loading conditions. The workload data collected are used for training comparator neural networks, a novel architecture for learning to compare functions of time series, and for generating a load index to be used by the load balancing strategy. Finally, the load index traces generated by the comparator networks are used in a population-based learning system for tuning the parameters of a given load balancing policy. Together, the system constitutes an automated strategy learning system for performance-driven improvement of existing load balancing software.
