Pathways To Pain Relief:

Pathways to Pain Relief Frances Sommer Anderson, Eric Sherman, 2013-01-21 Pathways to Pain Relief is based upon the pioneering work of John E Sarno MD Professor of Rehabilitation Medicine New York University School of Medicine Dr Sarno has advanced the idea that a wide variety of pain disorders are psychophysiologic in origin Psychophysiologic disorders previously referred to as psychosomatic disorders are just one aspect of the recently energized field of mindbody medicine What distinguishes Pathways to Pain Relief is that it embraces the position that musculoskeletal pain and other psychophysiologic disorders can originate from psychological experiences as a means to protect an individual from unbearable emotional distress Psychotherapeutic techniques based on the medicalization of musculoskeletal pain foreclose the possibility of approaching these conditions as a psychophysiologic disorder The medicalization paradigm prevents many clinicians from recognizing that the same emotional conflicts which lead to psychological symptoms can initiate the development of physical symptoms as well Pathways to Pain Relief provides details on how treatment has worked from the patient's and the therapist's point of view The authors Dr Frances Sommer Anderson Dr Eric Sherman present clinical case material to illustrate how musculoskeletal pain and other psychophysiologic disorders can originate from psychological experiences as a means to protect an individual from unbearable emotional distress **Cohen's Pathways of the Pulp**

Plant and Fungal Extracts and Metabolites in Neurotherapy: Exploring Their Pharmacology and Potential Clinical Uses Jian Hao,Igor

Lavrov,Xianhu Zhou,2025-05-29 Exploring phytochemistry and the treatment of neurological disorders this research topic addresses CNS disorders like Alzheimer s and Parkinson s which lack effective treatments A key area of research in this context is plants used in traditional and local medical systems The research topic merges ancient herbal traditions with modern science aiming to develop groundbreaking treatments for debilitating CNS conditions Plant and fungal metabolites known for their neuroprotective and anti inflammatory properties offer promising therapeutic strategies Advances in understanding their molecular mechanisms could offer novel therapeutic options for treating such neurological disorders Therefore this research topic explores the research themes linking ethnopharmacology and neuropharmacology By integrating traditional knowledge with contemporary scientific techniques studying plant and fungal extracts and individual metabolites could transform global treatment approaches for CNS disorders We envision that these contributions will improve the treatment of central nervous system CNS disorders by harnessing the therapeutic potential of phytochemicals and that they will contribute to a better understanding of existing treatments using plant and fungal extracts It addresses significant challenges posed by neurodegenerative diseases traumatic injuries and strokes characterized by complex pathologies and limited effective treatments By exploring the mechanisms bioavailability and safety profiles of such extracts and metabolites along with potential synergies with existing therapies this research seeks to bridge the gap between traditional and modern medical practices Advances in analytical technologies molecular biology and clinical methodologies facilitate precise identification isolation and evaluation of these compounds The initiative encourages collaborative research spanning molecular studies to clinical trials This effort underscores the critical role of plant derived compounds in neurotherapy and promotes their further exploration and application The Research Topic encompasses exploring medicinal plants and fungi for the treatment of CNS disorders conducting mechanistic studies on metabolites interactions with the CNS and clinical trials to evaluate the efficacy and safety of such preparations These essential components aim to provide a comprehensive understanding of how plant derived compounds can play a crucial role in Neurotherapy paving the way for

innovative treatments and improved outcomes for individuals grappling with CNS related conditions
 Discovery of new metabolites or chemically well characterised special extracts for treating CNS disorder
 Advances in drug delivery systems to enhance the bioavailability and therapeutic impact of chemically well defined extracts and metabolites
 Exploration of the molecular mechanisms of such metabolites and extracts and their interactions with the CNS
 Clinical or pre clinical studies on such preparations
