 spatiotemporal patterns may engage the nervous system in fundamentally different ways than can be achieved with
 conventional single frequency stimulation Coordinated Reset deep brain stimulation DBS may affect synaptic plasticity and
 result in long lasting after stimulation is turned off effects Spatio temporal paired pulse stimulation can be used to induce
 spike timing dependent strengthening or weakening of synaptic connections between brain regions for therapeutic purposes
 Burst stimulation may enable cell type specific targeting as recently shown in rodent models of DBS for Parkinson s Disease
 and in thalamic DBS in humans Burst stimulation has also shown promise in spinal cord for chronic pain and vagus nerve
 stimulation for cardiac applications And multiple hierarchies of temporal patterning may have their own unique effect on the
 nervous system as evidenced by data on intermittent theta burst transcranial magnetic stimulation for the control of
 depression APS Exam PDF-Army Public School PGT Computer Science Exam PDF eBook Dr Chandresh
