

least 100 feet before you plan to turn. Doing so allows other drivers an opportunity to slow down or change lanes to avoid a crash.

Stay in Control

To be a safe driver, you must obey the law and be able to adjust your driving to different situations. For example, on a freeway with a speed limit of 70 mph, if you are towing a vehicle or trailer that has more than two wheels or that weighs more than 750 pounds when either empty or loaded, you are not allowed to drive faster than 60 mph. In addition, when driving a truck with a gross weight of 10,000 pounds or more, the same 60 mph speed limit applies.

When approaching a downhill grade in a truck, it is a good idea to shift to a lower gear before starting down the hill. Otherwise, you may need to use the brakes too much, causing overheating and possible loss of braking power.

To maintain the best control on a curve, slow to a safe speed before entering the curve, then accelerate slightly through it. Braking in a curve is dangerous because you may lock the wheels and cause a skid.

The Road Ahead

Following vehicles too closely is dangerous and, depending on the size of your vehicle, it may be illegal. According to Michigan law, outside the corporate limits of a city or village, vehicles with gross weights over 5,000 pounds (loaded or unloaded) must not follow each other closer than 300 feet except when passing.

Not only is it important to maintain a safe following distance, it is important to watch the road ahead. To provide time to react to changes in traffic, you should look ahead at least 12 seconds' worth of travel time. This can be done by selecting a fixed object on the road ahead and counting "one thousand one, one thousand two..." until the front of your vehicle passes the object. If you have not counted to "one thousand twelve," you should be looking farther ahead.

Long Loads and Vehicle Height

If a load extends 4 feet or more past the rear of a vehicle's bed or body, a red flag or cloth at least 12 inches square (during the day) or a red light (at night) must be displayed at the extreme rear end of the load.

Knowing how tall your vehicle is can help prevent crashing into objects overhead such as a bridge or viaduct. The maximum height allowed for vehicles on Michigan roads and highways is 13 feet, 6 inches.

Using Mirrors

You need to know what drivers behind you are doing and how close they are to your vehicle. Not knowing could make it dangerous to change lanes, pass another vehicle or merge onto a highway. Commercial vehicles with a capacity of 1,000 pounds or more must have one outside rearview mirror on each side of the vehicle.

For narrow mirrors to be effective they must be properly adjusted. However, even careful adjustment will leave blind spots – areas to the side and rear – that cannot be seen in the mirrors. To offset this problem, turn your head to check what the mirrors do not show.

When There are Problems

If you park a disabled vehicle on the shoulder of a road, warning devices must be set out. The law requires that warning devices be placed 100 feet in front of and behind the vehicle, and at the road's edge within 10 feet of the vehicle's front or rear end.

Some problems may not require stopping on the side of the road. For example, your vehicle's brakes may become wet after driving through deep water or during heavy rain. To dry wet brakes, slow down and then apply the brakes gently until they work properly again.
