Past Climate Variability Through Europe And Africa Developments In Paleoenvironmental Research:

Past Climate Variability through Europe and Africa Richard W. Battarbee, Françoise Gasse, Catherine E.

Stickley, 2007-11-06 This book provides a major synthesis of evidence for past climate variability at the regional and continental scale across Europe and Africa. It focuses on two complementary time scales: the Holocene (approximately the last 11 500 years) and the last glacial interglacial cycle (approximately the last 130 000 years). An overview of the climate system of the past has never been attempted before on this scale and as such the volume represents a benchmark for future research. It is written by an expert group of climate change scientists and presents an insight into past climate variability that challenges climatologists who seek to explain climate dynamics of the past and provides climate modellers with a work of reference for data model comparison. The book is an advanced but very readable text essential for all students and scientists interested in global environmental change. *African Palaeoenvironments and Geomorphic Landscape Evolution* Jörgen

Runge, 2010-11-01 This 30th jubilee volume 2010 of *Palaeoecology of Africa* looks back and reflects the state of the art of what is actually known on former African climates and ecosystems in the format of review articles authored by specialists in the field. New research articles on climate and ecosystem dynamics as well as applied topics on geomorphic ha

Mediterranean Climate Variability P. Lionello, Paola Malanotte-Rizzoli, R. Boscolo, 2006-08-22 This multi-authored book provides an updated description of climate variability in the Mediterranean basin focusing on decadal and centennial time scales and on the results available on the impact of future emission scenarios at regional scale. The authors describe both local physical processes responsible for these variability such as changes in the surface properties and land use and global processes such as changes in the large scale atmospheric circulation associated to global warming, NAO, tropical monsoon and ENSO. Regional climate change issues are also addressed. *Mediterranean Climate Variability* aims to review the research on this region and to provide at the same time both an introduction and a reference for researchers. It covers topics typical of Climatology, Climate history, Meteorology, Oceanography, Environmental Science but the information here provided would also be useful for research in agriculture, social and economic studies. It is addressed to scientists and students interested in the Mediterranean climate and environment. Some topics have interesting connections to nearby regions: Northern Atlantic, West Africa, central and Eastern Europe. Each chapter will contain a summary meant to provide information to policy makers, researchers from other fields and in general to a wide audience without a technical expertise on climate. Provides an updated analysis of the Mediterranean climate features and guidelines for future research. Considers both oceanographic and atmospheric aspects. Analyzes the Mediterranean climate in a global perspective. Anderson, Andrew Goudie, Adrian Parker, 2013-02-07 This book delves into the environmental changes that have taken place during the Quaternary the two to three million years during which humans have inhabited the Earth and conveys the relevance of the study of this period to current environmental and climatic concerns

The Oxford Handbook of African Archaeology Peter Mitchell, Paul Lane, 2013-07-04 This Handbook provides a comprehensive

synthesis of African archaeology covering the entirety of the continent's past from the beginnings of human evolution to the archaeological legacy of European colonialism. Earth Paleoenvironments: Records Preserved in Mid- and Low-Latitude Glaciers L. DeWayne Cecil, Jaromy R. Green, Lonnie G. Thompson, 2006-04-11. Glaciers provide an unparalleled tool for studying global environmental change. This book is the first of its kind concentrating on the paleoenvironmental record archived in mid and low latitude glaciers. By concentrating mainly on the last 500 years of these records we can now see that laws enacted to protect our environment in Europe and North America are providing positive results. Documenting global mid and low latitude paleoenvironmental records in glaciers this volume forms a timely and essential complement to the wealth of literature on polar and Greenland ice sheet records. This text is directed towards undergraduate and graduate university audiences and forms an ideal supplement in courses dealing with climate and global environmental change, glaciology and natural resources management. It is also suitable in helping teach application of innovative analytical and interpretive methods and would be an excellent example of the rapidly emerging discipline of Forensic Earth Science. Wetlands: Monitoring, Modelling and Management Tomasz Okruszko, Edward Maltby, Jan Szatylowicz, Dorota Miroslaw-Swiatek, 2014-04-21. Wetlands are complex and dynamic ecological systems incorporating two important interlinked components: hydrology and vegetation. Modelling wetland components and processes reveals the nature of wetland systems and helps to predict the effects of environmental change. The main goal of much current research is the construction of a vigorous and spatially explicit model of wetland systems. Aquatic Biodiversity Koen Martens, 2012-12-06. In this age of increased fundamental and applied research on biodiversity, no single volume was as yet devoted to the various temporal and spatial aspects of aquatic biodiversity. The present book is published in honour of Professor Henri Dumont, Ghent, Belgium, at the occasion of his retirement as Editor in Chief of *Hydrobiologia*. The volume presents a selection of contributions on aquatic biodiversity written by colleagues from the editorial board, fellow editors of aquatic journals and former students and collaborators. Contributions deal with a wide spectrum of topics related to aquatic biodiversity and cover fields such as actual and palaeolimnology, taxonomy and fundamental and applied limnology. Even reconnaissance chapters on management and cultural impact of water bodies are included. The book combines state-of-the-art contributions in aquatic sciences. The bibliography has two parts: a complete list arranged alphabetically and the same references arranged in 33 different disciplines. These range from Palaeobotany with 17 entries to

Isotopes in Palaeoenvironmental Research Melanie J. Leng, 2006-01-27 This volume is intended to show how stable isotopes can be applied to understanding the palaeoenvironment There are chapters on the interpretation of isotopes in water tree rings bones and teeth lake sediments speleothems and marine sediments Crucial to the understanding of the environmental signal contained within the isotope composition of different materials is to gain more information about how rainfall isotope compositions are determined by climate Chapter 1 Darling et al describes O H and C stable isotope compositions in the modern day water and aqueous carbon cycles to provide a framework for the interpretation of these isotopes in the past The chapter on the water cycle divides naturally into a number of sections The starting point precipitation is especially important because it is the precursor to which most O and H isotope proxy studies are attempting to relate While much is understood about the isotope systematics of precipitation largely owing to the existence of the IAEA WMO Global Network for Isotopes in Precipitation GNIP important questions remain to be answered in relation to the isotope temperature gradients of past climatic conditions The chapter describes the three reservoirs of water sustaining all terrestrial proxies soil and vadose zone moisture groundwater and surface waters In each reservoir isotope effects intervene to modify to a greater or lesser extent the isotope signature of antecedent precipitation groundwaters are least affected and surface waters the most
