Implementing an e-Learning technology in your education infrastructure is a major step. More and more we need to find ways to make the classroom accessible to everyone. The need for online platforms is growing every month. Here's a nifty step-by-step process to implement e-Learning at your institute!

- How to boost recall and retention
- Does your tech infrastructure support it?
- Do your faculty and students show active support?

Step 2: Understand Your Scope

- Automate your assessment
- Old and new tools
- Educational units: Entire courses, seminars, particular lessons
- Online exams or offline exams

Step 3: Choose the Right Software

- Select the right software to help you share your online courses
- Do you understand the steep learning curve/challenges?
- Will you require mobile support for smartphones and tablets users?

Step 4: Quality Assurance

- Are you able to convey your ideas concisely and clearly?
- Is there any misleading jargon?
- Do the lessons work well on all required devices?
- Does the technology support heavy multimedia content?

Step 5: Marketing Initiatives

- How will learners benefit from it?
- Will you send out newsletters or personal invitations?
- Do you place ads/announcements in front of your target audience?

A Project Management Methodology for Multimedia Projects Stefan Hartweg,2002-05-17 Inhaltsangabe Abstract This paper tries to define a concept for managing multimedia projects efficiently and takes the suitability of existing methods into account Developing a valid solution makes it necessary to look at project management as a generic discipline first and then apply the results to the multimedia discipline Only then can we be sure that no important aspects of project management have been forgotten nor that existing and working strategies which could be applied to multimedia projects have been ignored This paper therefore defines project management and generally describes its areas of responsibility The question of whether project management is necessary and beneficial needs to be addressed as well After project management and the necessity to actively apply it in some form has been understood in general a specific focus on the existing information for multimedia project management will be undertaken It will become apparent that different viewpoints exist as to whether multimedia project management should apply project management methods of related industry areas such as software development This will justify the need to compare multimedia projects with software development projects After having gained an insight into project management as well as the characteristics of multimedia projects it is possible to determine the demands that a project management method needs to be able to meet to successfully manage multimedia projects It would be beyond the scope of this thesis to analyse every existing method Instead one method will be analysed as an example The useful aspects of the analysed method

will be identified along with its shortfalls in relation to multimedia development Finally recommendations on how the shortfalls could be corrected will be made so that a project manager will be able to use the examined method specifically suited to multimedia projects
