Patient Safety Achieving A New Standard For Care Quality Chasm:

Patient Safety Institute of Medicine, Board on Health Care Services, Committee on Data Standards for Patient Safety, 2003-12-20 Americans should be able to count on receiving health care that is safe To achieve this a new health care delivery system is needed a system that both prevents errors from occurring and learns from them when they do occur The development of such a system requires a commitment by all stakeholders to a culture of safety and to the development of improved information systems for the delivery of health care This national health information infrastructure is needed to provide immediate access to complete patient information and decision support tools for clinicians and their patients In addition this infrastructure must capture patient safety information as a by product of care and use this information to design even safer delivery systems Health data standards are both a critical and time sensitive building block of the national health information infrastructure Building on the Institute of Medicine reports *To Err Is Human* and *Crossing the Quality Chasm* Patient Safety puts forward a road map for the development and adoption of key health care data standards to support both information exchange and the reporting and analysis of patient safety data **Patient Safety**, 2004 Building on the Institute of Medicine reports *To Err Is Human* and *Crossing the Quality Chasm* this book puts forward a road map for the development and adoption of key health care standards to support both information exchange and the reporting and analysis of patient safety data Health IT and Patient Safety Institute of Medicine, Board on Health Care Services, Committee on Patient Safety and Health Information Technology, 2012-04-15 IOM's 1999 landmark study *To Err is Human* estimated that between 44 000 and 98 000 lives are lost every year due to medical errors This call to action has led to a number of efforts to reduce errors and provide safe and effective health care Information technology IT has been identified as a way to enhance the safety and effectiveness of care In an effort to catalyze its implementation the U S government has invested billions of dollars toward the development and meaningful use of effective health IT Designed and properly applied health IT can be a positive transformative force for delivering safe health care particularly with computerized prescribing and medication safety However if it is designed and applied inappropriately health IT can add an additional layer of complexity to the already complex delivery of health care Poorly designed IT can introduce risks that may lead to unsafe conditions serious injury or even death Poor human computer interactions could result in wrong dosing decisions and wrong diagnoses Safe implementation of health IT is a complex dynamic process that requires a shared responsibility between vendors and health care organizations *Health IT and Patient Safety* makes recommendations for developing a framework for patient safety and health IT This book focuses on finding ways to mitigate the risks of health IT assisted care and identifies areas of concern so that the nation is in a better position to realize the potential benefits of health IT *Health IT and Patient Safety* is both comprehensive and specific in terms of recommended options and opportunities for public and private interventions that may improve the safety of care that incorporates the use of health IT This book will be of interest to the health IT industry the

Medical Emergency Teams Michael A. DeVita, Ken Hillman, Rinaldo Bellomo, 2007-07-03 Why Critical Care Evolved METs In early 2004 when Dr Michael DeVita informed me that he was considering a textbook on the new concept of Medical Emergency Teams METs I was surprised At Presbyterian University Hospital in Pittsburgh we introduced this idea some 15 years ago but did not think it was revolutionary enough to publish This even though our fellows in critical care medicine training were all involved and informed about the importance of Condition C Crisis as it was called to distinguish it from Condition A Arrest We thought it absurd to intervene only after cardiac arrest had occurred because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems The above thoughts were logical in Pittsburgh where the legendary Dr Peter Safar had been working since the late 1950s on improving current resuscitation techniques first ventilation victims of apneic from drowning treatment of smoke inhalation and so on This was

followed by external cardiac compression upon demonstration of its efficiency in cases of unexpected sudden cardiac arrest Dr Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation He and many others emphasized the importance of getting the CPR team to the hospital victims of cardiac arrest as quickly as possible
