Metal Frets

**Truss Rod** An internal metal rod that allows you to adjust the neck's curvature. It allows adjustment to compensate for the extra strain of metal strings - the guitar had never 'seen strings' until the early 1900s of the 20th century. The truss rod allowed instrument makers to keep the tone of wood, but page 98.

**Machine Heads** Six machine heads aligned in a staggered row - allowing a straight string path - important for stability, especially when using vibrato. The iconic 'Fender' headstock has varied, but in the early 21st century the classic has returned. See Specific case studies on page 104.

**Neck** A one-piece removable neck - classically with an integrated maple fingerboard - many Strats now have conventional rosewood fingerboards which are not just harder wearing but also have an effect on the sound. Many players insist on the original formula. The 'A' wood some feature means a 'hotter' can take an hour for 3 days (see page 70). The original 21 frets are now often augmented to 22.

**Pickguard** Though often seen as a convenience - virtually all the electronics can be removed as one piece for simply changing the pickup or the number of Strats and other 1950s style electronics.

Pickup Covers

**Pickups** These single but effective single coil pickups revolutionised the sound of the electric guitar and set the stage for Rock 'n' Roll. A pickup update is simple (see page 82).

Volume and Tone Switches

**Pickup Selector** One accessible three-way switch for instant changes of tone colour. Now most commonly a five-way switch and sometimes augmented with FSR, SSS, 'Delta tone' and '5L switching'. See Specific case studies starting on page 104.
