From Action to Cognition Claes Von Hofsten, Kerstin Rosander, 2007-10-19 Extensive neurophysiological and neuropsychological evidence show that perception action and cognition are closely related in the brain and develop in parallel to one another Thus perception cognition and social functioning are all anchored in the actions of the child Actions reflect the motives the problems to be solved and the constraints and possibilities of the child's body and sensory motor system The developing brain accumulates experiences which it translates into knowledge used in planning future actions Such knowledge is available because events are governed by rules and regulations The present volume discusses all these aspects of how action and cognition are related in development

language and literacy development *The Child as Thinker* Sara Meadows, 2012-09-10 This second edition of *The Child as Thinker* has been thoroughly revised and updated to provide an informed and accessible overview of the varied and extensive literature on children's cognition. Both theory and research data are critically examined and educational implications are discussed. After a brief discussion of the nature and subject of cognition, Sara Meadows reviews children's thinking in detail. She discusses the ways children remember and organise information in general, the acquisition of skills such as reading, writing and arithmetic, and the development of more complex reasoning as children grow to maturity. As well as studies that typically describe a generalised child, the book also reviews some of the main areas relevant to individual differences in normal cognitive development and critically examines three major models of cognitive development. In outlining the work of Piaget, information processing accounts and neo-Vygotskian theories, she also evaluates their different explanations of cognitive development and their implications for education. Finally, the book examines biological and social factors that may be involved in normal and suboptimal cognitive development. Sara Meadows provides an important review of the crucial issues involved in understanding cognitive development and of the new data and models that have emerged in the last few years. This book brings together areas and approaches that have hitherto been independent and examines their strengths and weaknesses. *The Child as Thinker* is essential reading for all students of cognitive development. **Transforming the**

Workforce for Children Birth Through Age 8 National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success, 2015-07-23 Children are already learning at birth and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress and the adults who provide for the care and the education of young children bear a great responsibility for their health, development and learning. Despite the fact that they share the same objective to nurture young children and secure their future success, the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and

learning and are responsive to their individual progress Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice specific actions to improve professional learning systems and workforce development and research to continue to build the knowledge base in ways that will directly advance and inform future actions The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive and ultimately improve outcomes for children
