High engine speed length adjustment

At higher engine speeds, the pressure in the oil passages is high enough to overcome the resistance of the spring (176) and the piston (175) is forced to move towards the cylinder head.

Due to the oil pressure against the piston, increasing the pressure follows the movement of the piston.

When the spring is fully compressed, the piston moves back to its original position, the pressure in the oil passages is high enough to overcome the resistance of the spring (176) and the piston (175) is forced to move towards the cylinder head.

The passage of oil through the piston moves back to its original position, the pressure in the oil passages is high enough to overcome the resistance of the spring (176) and the piston (175) is forced to move towards the cylinder head.

When the piston returns to its original position, the pressure in the oil passages is high enough to overcome the resistance of the spring (176) and the piston (175) is forced to move towards the cylinder head.

When the piston and the spring are moving together, the pressure in the oil passages is high enough to overcome the resistance of the spring (176) and the piston (175) is forced to move towards the cylinder head.
