Haag,Gregory R. Peterson,Michael L. Spezio,2012-03-12 The field of religion and science is one of the most exciting and dynamic areas of research today This Companion brings together an outstanding team of scholars to explore the ways in which science intersects with the major religions of the world and religious naturalism The collection provides an overview of the field and also indicates ways in which it is developing Its multicultural breadth and scientific rigor on topics that are and will be compelling issues in the first part of the twenty first century and beyond will be welcomed by students and scholars alike **Phenomenology in Action in Psychotherapy** Ian Rory Owen,2015-04-08 This book takes Edmund Husserl s phenomenology and applies it to help psychotherapy practitioners formulate complex psychological problems The reader will learn about Husserl s system of understanding and its concepts that can point to first person lived experience and about the work of Husserl scholars who have developed a way to be precise about the experiences that clients have Through exploring the connection between academic philosophy of consciousness and mental health themes of biopsychosocial treatment planning psychopathology of personality and psychological disorders and the treatment of complex psychological problems all emerge The author shows that Husserlian phenomenology can be used in the design of interventions for each client in a process called formulation Once the intentionality of consciousness of an individual is understood by asking simple questions it becomes possible to define problematic experiences This is a means of creating informed consent for treatment and it also makes it clear to clients what is happening for them so helping them understand themselves and how they see the world We also see how Husserl s phenomenology is a vehicle for psychotherapists to present their knowledge about the research literature of what has been found to be effective care This volume applies the concepts and practices of phenomenology in a concrete way relating them to the practice of therapy and showing the value of a qualitative approach to understanding mental processes and the nature of human beings as motivated by values meanings and other conscious experiences This is a readable text in simple language that condenses key aspects of Husserl s thinking in relation to the theory and practice of

psychotherapy and it is suitable for philosophers and practitioners of psychology psychiatry and the psychotherapies including psychoanalysis Embodied Minds in Action Robert Hanna,Michelle Maiese,2009-01-08 In Embodied Minds in Action Robert Hanna and Michelle Maiese work out a unified treatment of three fundamental philosophical problems the mind body problem the problem of mental causation and the problem of action This unified treatment rests on two basic claims The first is that conscious intentional minds like ours are essentially embodied This entails that our minds are necessarily spread throughout our living organismic bodies and belong to their complete neurobiological constitution So minds like ours are necessarily alive The second claim is that essentially embodied minds are self organizing thermodynamic systems This entails that our mental lives consist in the possibility and actuality of moving our own living organismic bodies through space and time by means of our conscious desires The upshot is that we are essentially minded animals who help to create the natural world through our own agency This doctrine the Essential Embodiment Theory is a truly radical idea which subverts the traditionally opposed and seemingly exhaustive categories of Dualism and Materialism and offers a new paradigm for contemporary mainstream research in the philosophy of mind and cognitive neuroscience **The Spirit of the Age** ,1850 Our Day ,1898 **God's Providence and Randomness in Nature** Robert John Russell,Joshua M. Moritz,2019-02-11 In October 2014 a group of mathematicians physicists ecologists philosophers and theologians gathered at a special conference in Berkeley California to present the results of a two year research program dubbed Project SATURN This program explored many rich avenues of thought at the intersection of modern science and Christian theology Chief among them is the possibility that specific processes might be so complex that they do not have sufficient physical causes Known as ontological indeterminism this idea has profound implications for theology Specifically it allows God to be thought of as acting providentially within nature without violating the laws and processes of nature Such a momentous insight could influence how we understand free will natural evil suffering in nature and the relation between divine providence and human evolution The essays collected here discussed these topics and were initially presented at the 2014 conference Part I establishes the scientific basis for conceptualizing specific processes in the universe as inherently random and possibly indeterministic Part II discusses the philosophical and theological issues that spring from this understanding Together they represent the cutting edge of thought in the increasingly productive dialogue between science and theology Short for the Scientific and Theological Understandings of Randomness in Nature Project SATURN was created by the Center for Theology and the Natural Sciences a Program of the Graduate Theological Union Berkeley It was funded with a grant administered by Calvin College and provided by the John Templeton Foundation
