### hEX (RB750Gr3)

#### First use

1. Choose your powering solution, please see [Powering](#) section for possibilities.
2. Connect your internet cable to port 1 (labeled "Internet"), and local network computers to ports 2-5.
3. Connect your direct input power jack if not using PoE, to start up the device.
4. If using PoE please see section [PoE Adapter](#) on how to connect.
5. The device will boot up and after a short beep, the network will be available for connecting.
6. Set your computer IP configuration to automatic (DHCP).
7. Once connected to the network, open <https://192.168.88.1> in your web browser to start configuration, since there is no password by default, you will be logged in automatically.
8. We recommend clicking the "Check for updates" button and updating your RouterOS software to the latest version to ensure the best performance and stability.
9. Set up your password on the screen that loads.

#### Mounting

This device is designed for use indoors by placing it on the flat surface or mounting on the wall, mounting points are shown in the picture below, screws are not included in the package. Screws with size 4x25 mm fit nicely, depending on your wall structure you can use screws 6x30 mm and 8 mm drill bit if needed. When mounting on the wall, please ensure that the cable feed is pointing downwards. We recommend using Cat5 cable for our devices. The IP rating scale for this device is IPXX.

#### Powering

The device accepts power from the power jack or from the first Ethernet port (Passive PoE):

- Direct input power jack (5.5mm outside and 2mm inside, female, pin positive) accepts 8-30 V ~DC.
- The first Ethernet port accepts passive Power over Ethernet 8-30 V ~DC. 1.2 V or more is recommended to compensate for the loss in cables.

The power consumption of this device under maximum load with attachments is 10 W. Without attachments 5 W.

#### Booting process

RouterOS includes many configuration options in addition to what is described in this document. We suggest starting here to get yourself accustomed to the possibilities: <https://mib.nf/help>. In case IP connection is not available, the Winbox tool (<https://mib.nf/winbox>) can be used to connect to the MAC address of the device from the LAN side (all access is blocked from the internet port by default). For recovery purposes, it is possible to boot the device from the network, see a section [Reset button](#).

#### Extension Slots and Ports

- The device has five individual Ethernet ports, supporting automatic cross/straight cable correction (Auto MDIX), so you can use either straight or cross-over cables for connecting to other network devices.
- microSD card slot.
- USB type-A slot.

#### Buttons and jumpers

##### Reset button

The RouterBOOT reset button has the following functions. Press the button and apply the power, then:

- Release the button when a green LED starts flashing, to reset RouterOS configuration to defaults.
- Release the button when the LED turns solid green to clear all configuration and bridge all interfaces.
