**Alzheimer's Disease in the Middle-aged** Hyun Sil Jeong, 2008 Dementia is a brain disorder that seriously affects a person's ability to carry out daily activities The most common form of dementia among older people is Alzheimer's disease AD which involves the parts of the brain that control thought memory and language Age is the most important known risk factor for AD The number of people with the disease doubles every 5 years beyond age 65 AD is a slow disease starting with mild memory problems and ending with severe brain damage The course the disease takes and how fast changes occur vary from person to person On average AD patients live from 8 to 10 years after they are diagnosed though the disease can last for as many as 20 years Current research is aimed at understanding why AD occurs and who is at greatest risk of developing it improving the accuracy of diagnosis and the ability to identify those at risk discovering developing and testing new treatments and discovering treatments for behavioral problems in patients with AD This new book gathers state of the art research from leading scientists throughout the world which offers important information on understanding the underlying causes and discovering the most effective treatments for Alzheimer's Disease Self-Identity after Brain Injury Tamara Ownsworth, 2014-03-26 An injury to the brain can affect virtually any aspect of functioning and at the deepest level can alter sense of self or the essential qualities that define who we are In recent years there has been a growing body of research investigating changes to self in the context of brain injury Developments in the cognitive and social neurosciences psychotherapy and neurorehabilitation have together provided a rich perspective on self and identity reformation after brain injury This book draws upon these theoretical perspectives and research findings to provide a comprehensive account of the

impact of brain injury on self identity The second half of this book provides an in depth review of clinical strategies for assessing changes in self identity after brain injury and of rehabilitation approaches for supporting individuals to maintain or re establish a positive post injury identity The book emphasizes a shift in clinical orientation from a traditional focus on alleviating impairments to a focus on working collaboratively with people to support them to re engage in valued activities and find meaning in their lives after brain injury Self Identity after Brain Injury is the first book dedicated to self identity issues after brain injury which integrates theory and research and also assessment and intervention strategies It will be a key resource to support clinicians and researchers working in brain injury rehabilitation and will be of great interest to researchers and students in clinical psychology neuropsychology and allied health disciplines **Neural Repair,**

**Transplantation, and Rehabilitation** Roger A. Barker, Stephen B. Dunnett, 1999 This book begins with a synopsis of experimental work underlying degeneration and recovery in the nervous system which is then discussed in the context of strategies to repair the central nervous system CNS and peripheral nervous system PNS The major part of the book is given over to the approach involving the use of transplanted tissues to replace and restore disrupted neural networks This experimental work has formed the basis for the emerging clinical trials employing neural grafts for diseases such as Parkinson s and Huntington s which are discussed in detail The book then goes on to discuss newer cellular strategies involving the manipulation of neural cells both in culture and genetically an approach that may ultimately be employed in the clinical situation Neural Repair Transplantation and Rehabilitation is unique in bridging the gap from experimental studies to clinical trials whilst also providing the non specialist with a background in rehabilitation strategies as well as basic neuroscience It is recommended for all those involved in the management of patients with degenerative and traumatic injuries to the nervous system Assessing Pain and Communication in Disorders of Consciousness Camille Chatelle, Steven

Laureys, 2015-12-14 Recent advances in medicine for resuscitation and care have led to an increased number of patients that survive severe brain damage but who are poorly responsive and non communicative at the bedside This has led to a striking need to better characterize understand and manage this population who present a real challenge for the assessment of pain and for planning treatment This edited collection provides clinicians with a guide to recent developments in research on pain perception and assessment and the detection of consciousness and communication in patients with disorders of consciousness DOC With contributions from leading global researchers the book gives an overview of issues concerning the assessment of pain It also covers the development of suitable tools both to improve pain management and to detect consciousness and communication in these patients to influence their prognosis and treatment and their quality of life Methodological and ethical issues concerning the implication for future research are also considered The book will be an invaluable guide for clinicians medics and therapists working in rehabilitation and acute care particularly in the demanding field of pain perception pain assessment and detection of consciousness and communication in patients with DOC It will also

be useful for students and researchers in neuropsychology and medical sciences      Single-Case Experimental Designs for Clinical Research and Neurorehabilitation Settings Robyn Tate, Michael Perdices, 2019-01-15 This book is a practical resource designed for clinicians researchers and advanced students who wish to learn about single case research designs It covers the theoretical and methodological underpinnings of single case designs as well as their practical application in the clinical and research neurorehabilitation setting The book briefly traces the history of single case experimental designs SCEDs outlines important considerations in understanding and planning a scientifically rigorous single case study including internal and external validity describes prototypical single case designs withdrawal reversal designs and the medical N of 1 trial multiple baseline designs alternating treatments designs and changing criterion designs and required features to meet evidence standards threats to internal validity and strategies to address them addresses data evaluation covering visual analysis of graphed data statistical techniques and clinical significance and provides a practical ten step procedure for implementing single case methods Each chapter includes detailed illustrative examples from the neurorehabilitation literature Novel features include A focus on the neurorehabilitation setting which is particularly suitable for single case designs because of the complex and often unique presentation of many patients clients A practical approach to the planning implementation data analysis and reporting of single case designs An appendix providing a detailed summary of many recently published SCEDs in representative domains in the neurorehabilitation field covering basic and instrumental activities of daily living challenging behaviours disorders of communication and cognition mood and emotional functions and motor sensory disabilities It is valuable reading for clinicians and researchers in several disciplines working in rehabilitation including clinical and neuropsychology education language and speech pathology occupational therapy and physical therapy It is also an essential resource for advanced students in these fields who need a textbook for specialised courses on research methodology and use of single case design in applied clinical and research settings      **Teoria e Prática na Reabilitação Neuropsicológica** Denise Ren da Fontoura, Luciana Tisser, Orlando Bueno, Silvia Bolognani, Thirzá Frison, 2020-03-30 Teoria e Prática na Reabilitação Neuropsicológica um livro que se destina a profissionais e estudantes da área de saúde que atuam na avaliação e reabilitação neuropsicológica O livro dividido em duas partes discute a teoria e apresenta o estudo de casos clínicos Assim objetiva-se unir a teoria prática clínica Disponibiliza material para aprimoramento na área de reabilitação neuropsicológica abrangendo a reabilitação das funções de memória atenção funções executivas e linguagem      Handbook of Head Trauma Charles J.
