

# Nervous System

You are able to pull your hand quickly away from hot water before pain is felt because:

- a. This movement of the hand is a reflex that involves intervention of the spinal cord only
- b. Movement of the hand does not require intervention by the CNS
- c. The brain reacts quickly to prevent injury
- d. The autonomic system of the PNS intervenes to speed the contraction of the hand muscles

Meanings of Pain Simon van Rysewyk, 2017-02-07 Although pain is widely recognized by clinicians and researchers as an experience pain is always felt in a patient specific way rather than experienced for what it objectively is

making perceived meaning important in the study of pain The book contributors explain why meaning is important in the way that pain is felt and promote the integration of quantitative and qualitative methods to study meanings of pain For the first time in a book the study of the meanings of pain is given the attention it deserves All pain research and medicine inevitably have to negotiate how pain is perceived how meanings of pain can be described within the fabric of a person's life and neurophysiology what factors mediate them how they interact and change over time and how the relationship between patient researcher and clinician might be understood in terms of meaning Though meanings of pain are not intensively studied in contemporary pain research or thoroughly described as part of clinical assessment no pain researcher or clinician can avoid asking questions about how pain is perceived or the types of data and scientific methods relevant in discovering the answers

**Index Medicus**, 2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings Archives of Neurology and Psychiatry, 1921 **A.M.A. Archives of Neurology and Psychiatry**, 1921 ATP-gated P2X receptors in health and disease Andrea Nistri, Geoffrey Burnstock, Baljit S Khakh, Rashid Giniatullin, 2015-01-05 Extracellular ATP is currently recognized as one of the most widely distributed neurotransmitters and neuromodulators in the peripheral and central nervous system ATP gated P2X receptors are expressed by neurons glial and many other non neuronal cells and represent an attractive target for therapeutic interventions Diverse molecular and cellular mechanisms have been identified for P2X

receptor functioning including the ability to enlarge the size of the ion pore associated with the release of several key immune molecules. A major recent breakthrough was the determination of the X-ray crystal structures of zebrafish P2X<sub>4</sub> receptor in ATP-bound and ATP-free states. The P2X receptor research field is rapidly growing as evidenced by the almost 2000 papers published in the last 5 years. However, despite the fundamental signalling function of extracellular ATP in the nervous system, the widespread roles of P2X receptors have not been widely elucidated and presented in textbooks. In this volume of papers, we aim to gather a collection of high-quality papers detailing the latest insights from the most accomplished international P2X receptor researchers. Importantly, basic research into P2X receptors has a strong translational impact, and our collection of articles could be a valuable guide for the development of new pharmacological and biotechnological tools addressing the function of P2X receptors. Within this collection, we plan to cover receptor structure-function relationships, receptor trafficking, to highlight the special properties of P2X receptors and their pharmacological profiles, and to describe the translational aspects of cellular ATP signaling in pain and in other neurological and vascular diseases.
