**Brain, Consciousness, and God** Daniel A. Helminiak, 2015-07-21 A constructive critique of neuropsychological research on human consciousness and religious experience that applies the thought of Bernard Lonergan Brain Consciousness and God is a constructive critique of neuroscientific research on human consciousness and religious experience An adequate epistemology a theory of knowledge is needed to address this topic but today there exists no consensus on what human knowing means especially regarding nonmaterial realities Daniel A Helminiak turns to twentieth century theologian and philosopher Bernard Lonergan s breakthrough analysis of human consciousness and its implications for epistemology and philosophy of science Lucidly summarizing Lonergan s key ideas Helminiak applies them to questions about science psychology and religion Along with Lonergan eminent theorists in consciousness studies and neuroscience get deserved detailed attention Helminiak demonstrates the reality of the immaterial mind and addressing the Cartesian mind body problem explains how body and mind could make up one being a person Human consciousness is presented not only as awareness of objects but also as self

presence the self conscious experience of human subjectivity a spiritual reality Lonergan s analyses allow us to say exactly what spiritual means and it need have nothing to do with God This book makes a seminal contribution to the psychology of religion and is on the cutting edge of the growing interest in the spiritual dimensions of human beings Daniel Helminiak writes knowledgeably about neurobiology psychotherapy philosophy and even psychedelic experience His chapter on the God concept is a tour de force and worth the price of the entire book Once I started this book I could barely put it down Stanley Krippner Saybrook University This is an amazing book It is both lucid and brilliant Deeply informed by Bernard Lonergan s systematic treatment of human knowing as a composite of experience understanding and judgment Daniel Helminiak masterfully places study of spirituality within the self transcending dimension of the human mind and in so doing differentiates and interrelates neuroscience psychology spirituality and theology Ralph W Hood University of Tennessee at Chattanooga In this book magnificently and comprehensively Helminiak struggles toward an integrated perspective on the unfolding of the universe Focused on humanity his topic is actually the origins and dynamics of human yearning As best he can he meets contemporary theorists on their own ground and repeatedly nudges their thinking toward a more coherent position The result cuts both ways It challenges students of Lonergan who underappreciate natural and social processes and it challenges natural and social scientists who seek a science of mind while subtly sidestepping their inquiring selves Yet Helminiak presents only a seedling Its full bloom would be Lonergan s new global omnidisciplinary science envisaged in Method It does indeed qualify as Patricia Churchland s sought real humdinger of a solution Philip McShane author of Randomness Statistics and Emergence Intense yet lucidly clear this work by Daniel Helminiak provides a sequel to Michael H McCarthy s The Crisis of Philosophy Helminiak turns a laser on the crisis and not only exposes significant counterpositions but also offers a solution using the intellectual epistemology of Bernard Lonergan Worth a read by anyone seeking real explanation rather than mere description this work invites readers to be weaned from picture thinking to claim the reality of their intelligence whatever their field Carla Mae Streeter Aquinas Institute of Theology

**Brain, Self and Consciousness** Sangeetha Menon, 2013-10-24 This book discusses consciousness from the perspectives of neuroscience neuropsychiatry and philosophy It develops a novel approach in consciousness studies by charting the pathways in which the brain challenges the self and the self challenges the brain The author argues that the central issue in brain studies is to explain the unity continuity and adherence of experience whether it is sensory or mental awareness phenomenal or self consciousness To address such a unity is to understand mutual challenges that the brain and the self pose for each other The fascinating discussions that this book presents are How do the brain and self create the conspiracy of experience where the physicality of the brain is lost in the subjectivity of the self

**Consciousness Studies in Sciences and Humanities: Eastern and Western Perspectives** Prem Saran Satsangi, Anna Margaretha Horatschek, Anand Srivastav, 2024-02-11 This book presents consciousness models from Eastern and Western perspectives that accommodate current scientific research in the natural

sciences and humanities from neurological experiments through philosophical enquiries to spiritual approaches It offers up to date research from key disciplines in consciousness studies ranging from neurology quantum mechanics algorithmic science mathematics and astrophysics to literary studies philosophy and comparative theology The volume examines the dichotomy between Western and Eastern perceptions of consciousness where consciousness is perceived as brain activity by Western scientists and as a divine presence by various religions especially in the East The essays contextualize each other and reciprocally illuminate the potential and limits of the respective approaches The texts aim at a transdisciplinary and transcultural exchange of ideas in consciousness studies and address a readership from interested lay readers to experts of the field The volume is of interest to researchers of consciousness studies      Consciousness from a Broad Perspective

Anders Hedman, 2017-05-23 This volume offers an introduction to consciousness research within philosophy psychology and neuroscience from a philosophical perspective and with an emphasis on the history of ideas and core concepts The book begins by examining consciousness as a modern mystery Thereafter the book introduces philosophy of mind and the mind body problem and proceeds to explore psychological philosophical and neuroscientific approaches to mind and consciousness The book then presents a discussion of mysterianist views of consciousness in response to what can be perceived as insurmountable scientific challenges to the problem of consciousness As a response to mysterianist views the next chapters examine radical approaches to rethinking the problem of consciousness including externalist approaches The final two chapters present the author's personal view of the problem of consciousness Consciousness remains a mystery for contemporary science a mystery raising many questions Why does consciousness persist as a mystery Are we humans not intelligent enough to solve the riddle of consciousness If we can solve this mystery what would it take What research would we need to conduct Moreover the mystery of consciousness prompts the larger question of how well the cognitive sciences have actually advanced our understanding of ourselves as human beings After all consciousness is not just a minor part of our existence Without consciousness we would not be human beings at all This book aims to increase the accessibility of major ideas in the field of consciousness research and to inspire readers to contribute to the ongoing discussion of the place of consciousness in nature      *Meditation - Neuroscientific Approaches and Philosophical Implications* Stefan

Schmidt, Harald Walach, 2013-11-27 This volume features a collection of essays on consciousness which has become one of the hot topics at the crossroads between neuroscience philosophy and religious studies Is consciousness something the brain produces How can we study it Is there just one type of consciousness or are there different states that can be discriminated Are so called higher states of consciousness that some people report during meditation pointing towards a new understanding of consciousness Meditation research is a new discipline that shows new inroads into the study of consciousness If a meditative practice changes brain structure itself this is direct proof of the causal influence of consciousness onto its substrate If different states of consciousness can be linked with properties and states of the brain this

can be used to study consciousness more directly If the sense of self is modifiable through meditative techniques and this can be objectively shown through neuro imaging this has profound implications for our understanding of who we are Can consciousness in deep states of meditative absorption actually access some aspect of reality which we normally don t Meditation research can potentially foster us with a new access to the phenomenological method in general This has even been branded with a new catch phrase Contemplative Science It brings together the most modern neuroscientific approach and the most advanced phenomenological methodology of studying the mind from within through highly skilled self observation that has gone through many thousand hours of honing the capacity to look carefully without distraction This book addresses these issues by bringing together some of the leading researchers and thinkers in the field The scope of the volume reaches from first person neuroscience to Indian philosophy from pedagogic applications to epistemological aspects and from compassion meditation to the study of brain activity

**Cognitive Sciences and Medieval Studies** Juliana Dresvina, Victoria Blud, 2020-11-01 This study brings together medieval studies and cognitive methodologies in a study specifically aimed at medievalists It presents a longer history of certain mental health conditions and locates contemporary debates about the mind in a broader historical framework It considers both the benefits of incorporating insights from contemporary neuroscientific and cognitive studies into the exploration of the past and the benefits of employing historical models and case studies in order to reflect on modern methods

Meditation - Neuroscientific Approaches and Philosophical Implications Stefan Schmidt, Harald Walach, 2013-11-19 This volume features a collection of essays on consciousness which has become one of the hot topics at the crossroads between neuroscience philosophy and religious studies Is consciousness something the brain produces How can we study it Is there just one type of consciousness or are there different states that can be discriminated Are so called higher states of consciousness that some people report during meditation pointing towards a new understanding of consciousness Meditation research is a new discipline that shows new inroads into the study of consciousness If a meditative practice changes brain structure itself this is direct proof of the causal influence of consciousness onto its substrate If different states of consciousness can be linked with properties and states of the brain this can be used to study consciousness more directly If the sense of self is modifiable through meditative techniques and this can be objectively shown through neuro imaging this has profound implications for our understanding of who we are Can consciousness in deep states of meditative absorption actually access some aspect of reality which we normally don t Meditation research can potentially foster us with a new access to the phenomenological method in general This has even been branded with a new catch phrase Contemplative Science It brings together the most modern neuroscientific approach and the most advanced phenomenological methodology of studying the mind from within through highly skilled self observation that has gone through many thousand hours of honing the capacity to look carefully without distraction This book addresses these issues by bringing together some of the leading researchers and thinkers in the field

**Spirituality across Disciplines: Research and Practice:** Marian de Souza, Jane Bone, Jacqueline Watson, 2016-06-29 This book collects multiple disciplinary voices which explore current research and perspectives to discuss how spirituality is understood interpreted and applied in a range of contexts It addresses spirituality in combination with such topics as Christian mysticism childhood and adolescent education midwifery and sustainability It links spirituality to a variety of disciplines including cognitive neuroscience sociology and psychology Finally it discusses the application of spirituality within the context of social work teaching health care and occupational therapy A final chapter provides an analytical discussion of the different voices that appear in the book and offers a holistic description of spirituality which has the potential to bring some unity to the meaning expression and practice of spirituality across a variety of disciplines as well as across cultural religious and secular worldviews A strength of the book is that each chapter is characterized by a fearless confronting of oppositional perspectives and use of the latest research in addressing them The book takes the difficult topic of spirituality into almost every nook and cranny of personal and professional life There is a persistent grasping of the contentiousness of the topic together with addressing counter positions and utilizing updated research across a range of fields in doing this The opening and closing chapters serve as book ends that keep the whole volume together Terence Lovat The University of Newcastle Australia The interdisciplinary nature of the work is by far the strongest aspect of this volume It has the potential to contribute to a dialogue between different professions and disciplines This prospective publication promises to promote a more holistic approach to the study of spirituality This volume takes into consideration a wide variety of issues The way the editors have structured the sequence of chapters contributes to facilitate any possible dialogue between the different areas Adrian Mario Gellel University of Malta Malta

**Secular Spirituality** Harald Walach, 2014-09-18 This book discusses spirituality as an emerging scientific topic from a historical perspective with extensive discussion of the mind body problem and of scientific concepts of consciousness While the book focuses on the Western tradition of Enlightenment it also implicitly addresses the double meaning of the term with the Eastern tradition describing it as a state of true knowledge which is an important goal on an individual's spiritual path and the Western tradition seeing it as the collective process of getting rid of narrow minded dogmas and concepts The book is based on a simple yet challenging premise Science has not gone far enough in the scientific process of going from a collective mind tied up in dogmatic teachings to a truly free mind that seemingly freed itself from bondage and restrictions The book shows that science and with it our whole Western culture has to incorporate spirituality if it is to realize this goal of enlightenment If that is done and it can only be done by many individuals actually practicing spirituality this will also lead to the individual type of enlightenment

*Psychosis and Spirituality* Isabel Clarke, 2010-10-26 The new edition of this successful text builds on the very latest research to present an original and unique exploration of the psychology of both

spirituality and psychosis The editor brings together fascinating perspectives from a broad range of distinguished contributors This new edition covers the most recent body of research both qualitative and quantitative in its exploration of the interface between psychosis and spirituality and investigation into anomalous experiences Ten new chapters added and the remaining text completely updated New to this edition is an expanded clinical section relevant to clinicians working with psychosis Offers a fundamental rethink of the concept of psychosis and proposes new insights into spirituality Includes feature chapters from a distinguished list of contributors across a broad range of disciplines including Peter Fenwick Peter Chadwick David Kingdon Gordon Claridge Neil Douglas Klotz and David Lukoff     Spirituality and Global Ethics Mahmoud Masaeli,Rico Sneller,2017-05-11 This volume addresses three fundamental questions about the interplay between the ethics of globality and spirituality What are the practical implications of spirituality for the condition of life in a turbulent era of violent religious non religious extremism In what way can spirituality the view of love compassion tolerance and mutual recognition encounter mistrust enmity separateness and violence How and in what way can spirituality contribute to the newly emerging global ethics Religious scholars distinguish between the esoteric and exoteric sides of belief systems Esotericism centres on the inner awareness and conceals a certain spirituality that is only transmittable to those who could successfully pass through a process of initiatic preparation and transpersonal practices to understand the mystical dimensions of existence In contrast exotericism takes the outer dimension of every day consciousness into account and favours the possibility of the popular understanding of the essence of existence In this perspective truth could be grasped by the public without the need of any transpersonal initiative and transformation of consciousness Esotericism extends beyond religion and has become the spiritual philosophy of life without the need of being essentially religious It has become common notably in the West to identify oneself as spiritualist without having religious affiliations The condition of globality has provided an unprecedented opportunity for spiritual perspectives to grow Ideas perspectives beliefs and philosophies of life are growing outside local national containers to express themselves in different global settings while the forces of globalisation are influencing local identities and cultures While evolving global transformations strengthen people s capability to leave institutionally ordered belief systems it simultaneously enables them to rearrange themselves around alternative perspectives These fundamental transformations cultivate a fabulous landscape for the growth of spirituality

**Spiritual Sensations** Sarah K. Balstrup,2020-09-17 The secular pluralist culture of the West encourages a subjective

approach to spiritual truth where stimulating emotional experiences such as those provided by film can contribute to personal conceptions of the sacred Examining Stanley Kubrick's 2001 A Space Odyssey 1968 as the principal case study and Gaspar Noé's Enter the Void 2009 and Lars von Trier's Melancholia 2011 as comparative examples Sarah Balstrup argues that these directors harness the affective properties of film to generate altered states of perception in a manner analogous to religious practice Powerful feelings of dissociation and indescribable significance typical of mystical testimony appear in viewer responses to these films demonstrating the continued sacralisation of such states of mind In their own way each film confronts the viewer with an apocalyptic revelation of the impersonal forces of the universe moving away from personhood and the human narrative into pure sensation They present a non deterministic spiritual truth that can be intuited but not explained mirroring developments in the religious sphere Investigating the relationship between cinematic technique and religious experience Spiritual Sensations offers an alternative approach to the study of religion and film that has been principally focused on narrative symbolism and the dramatisation of values Spiritual Sensations makes a further contribution to the field by analysing films contextually considering viewers subjective responses in light of religious and cultural change

**Textbook Osteopathic Medicine** Johannes Mayer,Clive Standen,2018-01-22 For the first time a 60 person team of internationally renowned editors and authors presents a textbook of osteopathic medicine that is oriented towards clinical symptoms Introductory chapters on history philosophy and the spread of osteopathy are followed by a presentation of its scientific basis that clearly demonstrates how firmly osteopathy is rooted in science Further chapters cover osteopathic research diagnosis and principles of treatment Two parts on therapeutic strategies in osteopathic practice form the core of this book The first is

divided into regions of the body the second into clinical specialties that offer opportunities for osteopathic treatment In both clinical parts osteopathic therapy is presented in the entirety in which it is actually practiced without the common but artificial separation of parietal visceral and craniosacral treatment First the clinical symptom is explained from a medical perspective then the osteopathic perspective and treatment is presented Thus the title is not only suitable for conveying a profound understanding of osteopaths in training be they doctors or non medical practitioners but also as a clinical reference of osteopathic medicine for everyday treatment

**Neo-Spiritual Aesthetics** Lina Aschenbrenner, 2022-12-15

Tracing embodied transformation in the context of Gaga the Israeli dance improvisation practice this book demystifies what Lina Aschenbrenner coins as neo spiritual aesthetics This book takes the reader on an analytical journey through a Gaga class outlining the effective aesthetics of Gaga as an example for the broader field of neo spiritualities It distinguishes a threefold effect of Gaga practice from a momentary extraordinary experience to a lasting therapeutic effect and finally Gaga's worldview potential It situates the effect in an assemblage of interrelating aesthetics of environment movement and bodies The book shows why seemingly leisure time activities such as Gaga form fruitful research objects to an academic study of religion and opens up research on neo spiritual practices In understanding the sensory effect of practice and its cultural and social implications the book follows an Aesthetics of Religion approach It departs from the idea that cognition is embodied and that the body is thus central to understanding cultural and social phenomena Drawing upon a wide array of data gathered in the context of Gaga at the Suzanne Dellal Center in Tel Aviv the book weaves together different methods of discourse ritual movement body knowledge and narrative analysis while acknowledging insights from neuroscience and cognitive science
