Gazzaniga, 2024-04-16 A shimmering new book This is the place to look to learn about our best scientific understanding of what it means to be human Steven Pinker New York Times bestselling author of The Language Instinct and How the Mind Works A cognitive neuroscientist at the University of California Santa Barbara and one of the inventors of the field takes us on a lively tour through the latest research on brain evolution The New York Times Book Review What happened along the evolutionary trail that made humans so unique In his accessible style Michael Gazzaniga pinpoints the change that made us thinking sentient humans different from our predecessors He explores what makes human brains special the importance of language and art in defining the human condition the nature of human consciousness and even artificial intelligence As wide ranging as it is deep and as entertaining as it is informative will please a diverse array of readers Publishers Weekly starred review A rich testimony to the incredible accomplishments of the human brain in coming to understand itself New York Sun Truly engaging CNBC com A savvy witty guide to neuroscience today Kirkus Reviews Brilliantly written and utterly fascinating Robert Bazell Chief Science Correspondent NBC News Sweeping erudite and humorous If you are looking for one book that gives you a Cook s Tour of the human brain where it came from and where it is heading this would be an excellent choice Pittsburgh Post Gazette *The Mind's Past* Michael S. Gazzaniga, 1998-05-07 Why does the human brain insist on interpreting the world and constructing a narrative In this ground breaking work Michael S Gazzaniga one of the world s foremost cognitive neuroscientists shows how our mind and brain accomplish the amazing feat of constructing our past a process clearly fraught

with errors of perception memory and judgment By showing that the specific systems built into our brain do their work automatically and largely outside of our conscious awareness Gazzaniga calls into question our everyday notions of self and reality The implications of his ideas reach deeply into the nature of perception and memory the profundity of human instinct and the ways we construct who we are and how we fit into the world around us Over the past thirty years the mind sciences have developed a picture not only of how our brains are built but also of what they were built to do The emerging picture is wonderfully clear and pointed underlining William James s notion that humans have far more instincts than other animals Every baby is born with circuits that compute information enabling it to function in the physical world Even what helps us to establish our understanding of social relations may have grown out of perceptual laws delivered to an infant s brain Indeed the ability to transmit culture an act that is only part of the human repertoire may stem from our many automatic and unique perceptual motor processes that give rise to mental capacities such as belief and culture Gazzaniga explains how the mind interprets data the brain has already processed making us the last to know He shows how what we see is frequently an illusion and not at all what our brain is perceiving False memories become a part of our experience autobiography is fiction In exploring how the brain enables the mind Gazzaniga points us toward one of the greatest mysteries of human evolution how we become who we are

The Consciousness Instinct Michael S. Gazzaniga, 2018-04-03 How do neurons turn into minds How does physical stuff atoms molecules chemicals and cells create the vivid and various worlds inside our heads The problem of consciousness has gnawed at us for millennia In the last century there have been massive breakthroughs that have rewritten the science of the brain and yet the puzzles faced by the ancient Greeks are still present This book puts the latest research in conversation with the history of human thinking about the mind giving a big picture view of what science has revealed about consciousness The idea of the brain as a machine first proposed centuries ago has led to assumptions about the relationship between mind and brain that dog scientists and philosophers to this day The author asserts that this model has it backward brains make machines but they cannot be reduced to one New research suggests the brain is actually a confederation of independent modules working together Understanding how consciousness could emanate from such an organization will help define the future of brain science and artificial intelligence and close the gap between brain and mind

Gazzaniga,2024-04-16 Michael S Gazzaniga one of the most important neuroscientists of the twentieth century gives us an

exciting behind the scenes look at his seminal work on that unlikely couple the right and left brain Foreword by Steven Pinker In the mid twentieth century Michael S Gazzaniga the father of cognitive neuroscience was part of a team of pioneering neuroscientists who developed the now foundational split brain brain theory the notion that the right and left hemispheres of the brain can act independently from one another and have different strengths In *Tales from Both Sides of the Brain* Gazzaniga tells the impassioned story of his life in science and his decades long journey to understand how the separate spheres of our brains communicate and miscommunicate with their separate agendas By turns humorous and moving *Tales from Both Sides of the Brain* interweaves Gazzaniga s scientific achievements with his reflections on the challenges and thrills of working as a scientist In his engaging and accessible style he paints a vivid portrait not only of his discovery of split brain theory but also of his comrades in arms the many patients friends and family who have accompanied him on this wild ride of intellectual discovery

Conversations in the Cognitive Neurosciences Michael S. Gazzaniga, 1997 Getting a fix on important questions and how to think about them from an experimental point of view is what scientists talk about sometimes endlessly It is those conversations that thrill and motivate observes Michael Gazzaniga Yet all too often these exciting interactions are lost to students researchers and others who are doing science
