Nevogenesis Ashfaq A. Marghoob,2012-10-13 The Abtropfung theory that nevi develop through the migration of nevus cells from the epidermis to the dermis prevailed for almost a century until the Hochsteigerung theory postulated the reverse pattern of migration Most recently however new insights gained from epidemiology cross sectional and longitudinal studies of nevi dermoscopy and confocal microscopy and cellular and molecular studies have brought into question both of these theories This book provides a comprehensive guide to current knowledge about nevogenesis by presenting these latest advances and in addition discusses issues yet to be resolved It will assist practicing physicians in effectively managing patients with a variety of nevi and will also be of great value to researchers in the field Importantly since nevi are associated with an increased risk of melanoma understanding nevogenesis may help to unravel some of the mysteries of melanomagenesis
