Biomarker Tests for Molecularly Targeted Therapies National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, Committee on Policy Issues in the Clinical Development and Use of Biomarkers for Molecularly Targeted Therapies, 2016-07-30 Every patient is unique and the evolving field of precision medicine aims to ensure the delivery of the right treatment to the right patient at the right time In an era of rapid advances in biomedicine and enhanced understanding of the genetic basis of disease health care providers increasingly have access to advanced technologies that may identify molecular variations specific to an individual patient which subsequently can be targeted for treatment Known as biomarker tests for molecularly targeted therapies these complex tests have the potential to enable the selection of the most beneficial treatment and also to identify treatments that may be harmful or ineffective for the molecular underpinnings of an individual patient s disease Such tests are key to unlocking the promise of precision medicine Biomarker tests for molecularly targeted therapies represent a crucial area of focus for developing methods that could later be applicable to other areas of precision medicine The appropriate regulatory oversight of these tests is required to ensure that they are accurate reliable properly validated and appropriately implemented in clinical practice Moreover common evidentiary standards for assessing the beneficial impact of biomarker guided therapy selection on patient outcomes as well as the effective collection and sharing of information related to those outcomes are urgently needed to better inform clinical decision making Biomarker Tests of Molecularly Targeted Therapies examines opportunities for and challenges to the use of biomarker tests to select optimal therapy and offers recommendations to accelerate progress in this field This report explores regulatory issues reimbursement issues and clinical practice issues related to the clinical development and use of biomarker tests for targeting therapies to patients Properly validated appropriately implemented biomarker tests hold the

potential to enhance patient care and improve outcomes and therefore addressing the challenges facing such tests is critical

Improving Diagnosis in Health Care National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, Committee on Diagnostic Error in Health Care, 2016-01-29 Getting the right diagnosis is a key aspect of health care it provides an explanation of a patient's health problem and informs subsequent health care decisions The diagnostic process is a complex collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem According to *Improving Diagnosis in Health Care* diagnostic errors inaccurate or delayed diagnoses persist throughout all settings of care and continue to harm an unacceptable number of patients It is likely that most people will experience at least one diagnostic error in their lifetime sometimes with devastating consequences Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment providing unnecessary or harmful treatment or resulting in psychological or financial repercussions The committee concluded that improving the diagnostic process is not only possible but also represents a moral professional and public health imperative *Improving Diagnosis in Health Care* a continuation of the landmark Institute of Medicine reports *To Err Is Human* 2000 and *Crossing the Quality Chasm* 2001 finds that diagnosis and in particular the occurrence of diagnostic errors has been largely unappreciated in efforts to improve the quality and safety of health care Without a dedicated focus on improving diagnosis diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity Just as the diagnostic process is a collaborative activity improving diagnosis will require collaboration and a widespread commitment to change among health care professionals health care organizations patients and their families researchers and policy makers The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety
