Gower Handbook of People in

Project Management Lindsay Scott, 2016-04-22 Modern projects are all about one group of people delivering benefits to others so it's no surprise that the human element is fundamental to project management. The Gower Handbook of People in Project Management is a complete guide to the human dimensions involved in projects. The book is a unique and rich compilation of over 60 chapters about project management roles and the people who sponsor, manage, deliver work in or are otherwise important to project success. It looks at the people issues that are specific to different sectors of organization: public, private and third sector; the organization of people in projects both real and virtual; the relationship between people, their roles and the project environment; and the human behaviours and skills associated with working collaboratively. Thus, this comprehensive and innovative handbook discusses all the important topics associated with employing, developing and managing people for successful projects. The contributors have been drawn from around the world and include experts ranging from practising managers to academics and advanced researchers. The Handbook is divided into six parts which begin with management and project organization and progress through to more advanced and emerging practices. It benefits hugely from Lindsay Scott's expert knowledge and experience in this field and from Dennis Lock's contributions and meticulous editing to ensure that the text and illustrations are always lucid and informative. **Corporate Culture**

Practices of German Corporations in the Host Country Indonesia Aang Koswara, 2022-10-13 This study addresses the corporate cultural practices of German companies in the host country Indonesia from the perspective of Indonesian employees, managers and German expatriates. The focus is on the intercultural challenges that arise in the practice of daily cooperation between Indonesian and German organizational members. Using qualitative methods, the study examines how these challenges are viewed and managed by organizational members, what cultural differences are evident in them and how these differences can be explained, and finally what strategies can be used to overcome the challenges in everyday business. This ethnographic study is based on interviews with Indonesian and German organizational members, analysis of internal company journals and newsletters and observations collected by the author as a professional stranger at Indonesian sites of German multinational companies. The study concludes that four cultural issues are fundamental factors in the corporate culture of German companies in the host country Indonesia: first, the implementation of a culture of integrity; second, issues of leadership in a hierarchy-driven social environment; third, the daily use of language and the flow of information in a multilingual professional environment; and finally, the creation and maintenance of harmonious family-like working relationships. **Statistics in MATLAB**

Managing Organizational Ecologies Keith Alexander, Ilfryn Price, 2013-05-02 The term Facilities Management has become global but fraught with confusion as to what the term signifies For some notably in the USA Facilities Management remains a discipline of human ecology Elsewhere the term has become conflated with an alternative meaning providing or outsourcing the provision of various services essential to the operation of particular buildings This volume redresses that imbalance to remind Facilities Management of its roots presenting evidence of Facilities Management success stories that engage the wider objectives of the organizations they serve and engaging students scholars and critical practitioners of general management with an appreciation of the power and influence of physical space and its place in the theory and practice of organizations This book includes management perspectives from outside the field to ensure that the issues raised are seen in an organizational and management context informing debate within the Facilities Management fraternity It draws on human ecology and the perspective of the firm as itself an intra organizational ecology of social constructs The ecology of a firm is not restricted to the firm s boundaries It extends to wider relationships between the firm and its stakeholders including in an age of outsourced building services the Facilities Management supply chain This volume offers arguments and evidence that managing such constructs is a key role for Facilities Management and an important participant in the provision of truly usable spaces

Robust Statistics Through the Monitoring Approach Anthony C. Atkinson, Marco Riani, Aldo Corbellini, Domenico Perrotta, Valentin Todorov, 2025-07-26 This open access book presents robust statistical methods and procedures through the monitoring approach with an emphasis on applications to linear regression Illustrating the theory it explores both large and small sample properties The performance of the forward search and of the monitoring of static robust estimators for regression data are illuminated

through numerous data analyses using MATLAB and R The book describes the results of many years work of the authors in the development of powerful methods of robust regression analysis Robust methods are designed to analyse contaminated data The well established static robust methods estimate model features such as parameter estimates assuming the amount of contamination in the data is known These methods are described in detail in Chapter 2 for estimation in a simple sample The extension to regression is presented in Chapter 3 with an emphasis on S estimation and related procedures as well as on least trimmed squares The monitoring methods of Chapter 4 including the forward search find the appropriate level of robustness for each data set and so avoid biased estimation from the inclusion of outliers and inefficiency due to the deletion of uncontaminated observations This analysis is followed by examples which illustrate the use of the interactive graphical analyses associated with the authors FSDA toolbox Numerical comparisons of the size and power of outlier tests appear in Chapter 5 Later chapters illustrate applications to response transformation in regression and to non parametric regression Extensions of the robust multiple regression model include Bayesian heteroskedastic time series and compositional regression together with the clustering of regression models Finally several approaches to model selection are investigated and robust analyses of regression data are presented that illustrate the use of the techniques introduced earlier Exercises are given at the end of each chapter with solutions at the end of the book The MATLAB code can be reproduced using MATLAB Online without the need for a license or via the language agnostic Jupyter notebook environment after installing the MATLAB kernel Online computer code is available for all examples and exercises together with a series of YouTube videos Aimed at professional statisticians and researchers concerned with insightful data analysis as well as postgraduate students the book may also serve as a text for a modern interactive robust regression course
