New Essays On The A Priori:

New Essays on the a Priori Paul Artin Boghossian, Christopher Peacocke, 2000 The topics of a priori knowledge and a priori justification have long played a prominent part in epistemology and the theory of meaning Recently there has been a surge of interest in the proper explication of these notions These newly commissioned essays by a distinguished international group of philosophers will have a substantial influence on later work in this area They discuss the relations of the a priori to meaning justification definition and ontology they consider the role of the notion in Leibniz Kant Frege and Wittgenstein and they address its role in recent discussions in the philosophy of mind Particular attention is also paid to the a priori in logic science and mathematics The authors exhibit a wide variety of approaches some remaining sceptical of the notion itself some proposing that it receive a non factualist treatment and others proposing novel ways of explicating and defending it The editors Introduction provides a helpful route into the issues *A Historical and Systematic Perspective on A Priori*

capacities and a test of the kinds of knowledge available to it For Wordsworth Coleridge Shelley Burke Wollstonecraft and Godwin the historical sequence of revolution counter revolution and terror in France and radicalism and repression in Britain occasioned a dramatic reassessment of how best to advance the project of enlightenment The political thought of these figures must be understood Michael contends in the context of their philosophical thought Major poems of the period including The Prelude The Excursion and Prometheus Unbound are in this reading an adjudication of competing political and epistemological claims This book bridges for the first time two traditional pillars of Romantic studies the period s politics and its theories of the mind and knowledge Combining literary and intellectual history it provides an account of British Romanticism in which high rhetoric political prose poetry and poetics converge in a discourse of enlightenment and emancipation

 Hanna, 2009-01-23 An argument that logic is intrinsically psychological and human psychology is intrinsically logical and that
 the connection between human rationality and logic is both constitutive and mutual In Rationality and Logic Robert Hanna
 argues that logic is intrinsically psychological and that human psychology is intrinsically logical He claims that logic is
 cognitively constructed by rational animals including humans and that rational animals are essentially logical animals In
 order to do so he defends the broadly Kantian thesis that all and only rational animals possess an innate cognitive logic
 faculty Hanna's claims challenge the conventional philosophical wisdom that sees logic as a fully formal or topic neutral
 science irreconcilably separate from the species or individual specific focus of empirical psychology Logic and psychology
 went their separate ways after attacks by Frege and Husserl on logical psychologism the explanatory reduction of logic to
 empirical psychology Hanna argues however that despite the fact that logical psychologism is false there is an essential link
 between logic and psychology Rational human animals constitute the basic class of cognizers or thinkers studied by cognitive
 psychology given the connection between rationality and logic that Hanna claims it follows that the nature of logic is
 significantly revealed to us by cognitive psychology Hanna's proposed logical cognitivism has two important consequences
 the recognition by logically oriented philosophers that psychologists are their colleagues in the metadiscipline of cognitive
 science and radical changes in cognitive science itself Cognitive science Hanna argues is not at bottom a natural science it is
 both an objective or truth oriented science and a normative human science as is logic itself **The Cambridge Companion**
