New Formula Cool Technology Imagination:

Work in Progress Rieke Jordan, 2019-05-02 *Work in Progress* Curatorial Labor in Twenty First Century American Fiction interrogates contemporary texts that showcase forms of reading practices that feel anachronistic and laborious in times of instantaneity and short buffering times Objects of analysis include the graphic narrative *Building Stories* by Chris Ware the music album *Song Reader* by the indie rock artist Beck Hansen and the computer game *Kentucky Route Zero* by the programming team Cardboard Computer These texts stage their fragmentary nature and alleged unfinishedness as a quintessential part of both their narrative and material modus operandi These works in and of progress feel both contemporary and retro in the 21st century They draw upon and work against our expectations of interactive art in the digital age incorporating and likewise rejecting digital forms and practices This underlines the material and narrative flexibilities of the objects for no outcome or reading experience is the same or can be replicated It becomes apparent that the texts presuppose a reader who invests her spare time in figuring these texts out diagnosing a contorted work leisure dichotomy working these stories out is a significant part of the reading experience for the reader curatorial labor This conjures up a reader who as the author argues is turned into a curator and creative entity of and in these texts for she implements and reassembles the options made available

The Racial Imaginary of the Cold War Kitchen Kate A. Baldwin, 2015-12-22 This book demonstrates the ways in which the kitchen the centerpiece of domesticity and consumerism was deployed as a recurring motif in the ideological and propaganda battles of the Cold War Beginning with the famous Nixon Khrushchev kitchen debate Baldwin shows how Nixon turned the kitchen into a space of exception while contemporary writers artists and activists depicted it as a site of cultural resistance Focusing on a wide variety of literature and media from the United States and the Soviet Union Baldwin reveals how the binary logic at work in Nixon s discourse setting U S freedom against Soviet totalitarianism erased the histories of slavery gender subordination colonialism and racial genocide *The Racial Imaginary of the Cold War Kitchen* treats the kitchen as symptomatic of these erasures connecting issues of race gender and social difference across national boundaries This rich and rewarding study embracing the literature film and photography of the era will appeal to a broad spectrum of scholars

Imaginative Geographies of Algerian Violence Jacob Mundy, 2015-09-09 The massacres that spread across Algeria in 1997 and 1998 shocked the world both in their horror and in the international community s failure to respond In

the years following the violence of 1990s Algeria has become a central case study in new theories of civil conflict and terrorism after the Cold War Such lessons of Algeria now contribute to a diverse array of international efforts to manage conflict from development and counterterrorism to the Responsibility to Protect doctrine and transitional justice With this book Jacob Mundy raises a critical lens to these lessons and practices and sheds light on an increasingly antipolitical scientific vision of armed conflict Traditional questions of power and history that once guided conflict management have been displaced by neoliberal assumptions and methodological formalism In questioning the presumed lessons of 1990s Algeria Mundy shows that the problem is not simply that these understandings these imaginative geographies of Algerian violence can be disputed He shows that today s leading strategies of conflict management are underwritten by and so attempt to reproduce their own flawed logic Ultimately what these policies and practices lead to is not a world made safe from war but rather a world made safe for war

Cold War Civil Defence in Western Europe Marie Cronqvist, Rosanna Farbøl, Casper Sylvest, 2021-12-06 This open access edited collection brings together established and new perspectives on Cold War civil defence in Western Europe within a common analytical framework that also facilitates comparative and transnational dimensions The current interest in creating disaster resilient societies demands new histories of civil defence Historical contextualization is essential in order to understand what is at stake in preparing devising and implementing forms of preparedness protection and security that are specifically targeted at societies and citizens Applying the concept of sociotechnical imaginaries to civil defence history the chapters of this volume cover a range of new themes from technology and materiality to media memory and everyday experience The book underlines the social embeddedness of civil defence by detailing how it both prompted new forms of social interaction and reflected norms and visions of the good society in an age where nuclear technology seemed to hold the key to both doom and salvation

Cold Warriors Roy R. Manstan, 2014-05-20 This is the story of a technological war There was no ambiguity behind the phrase mutually assured destruction nuclear weapons and the means to deliver them had become a reality The atomic bomb brought Japan to the USS Missouri for the formal surrender on September 2 1945 a date that marked the end of World War Two But this date also signaled the beginning of the Cold War as the Soviet Union emerged from the shadows There was no shot heard round the world no Fort Sumter no Pearl Harbor only the threat of a mushroom cloud far worse than what Japan experienced The Cold War remained cold because all the players aggressively pursued a strategy of deterrence aimed at keeping the opponents finger off the trigger The people on the front lines and behind the scenes the Cold Warriors on both sides would come from the civilians who created the technology and the military that would be entrusted with its use When tensions escalated it was the Navy and the silent service that played a critical role In Cold Warriors the author describes a Navy laboratory in New London Connecticut populated with pioneers in submarine and antisubmarine warfare technology Their mandate was to take the intellectual risks that would keep this country one step ahead of the Soviet Union But ideas alone would not win the Cold War

The scientists relied on teams of field engineers whose willingness to take on physical risk would convert theory into reality. One of these groups was simply known as the Divers. Beginning in the 1950s the U S Navy Underwater Sound Laboratory began sending a small number of its civilian staff one or two each year to train at one of the Navys diving schools. As the Laboratory in New London evolved into the Naval Undersea Warfare Center Newport Rhode Island that small team became the Engineering and Diving Support Unit. For more than a half century the divers would travel the world; this book is their story.

Making Globalisation a Force for Good Great Britain. Department of Trade and Industry, 2004. Globalisation refers to the process of growing interdependence between the economies and businesses of different countries with the ever increasing movement across national boundaries of goods, services, investment, finance and jobs. This White Paper considers the Government's policy approach towards international trade and investment based upon its commitment to sustainable development and in the context of an enlarged EU. It addresses the implications of globalisation both nationally and internationally and sets out the Government's vision of a world trading system which is fair as well as free for all. It contains three sections which focus on: i) the internationalisation of business markets and production; EU developments and the experience of developing countries; ii) how to ensure the UK economy benefits from globalisation; and iii) the role of trade and investment in global poverty reduction including the Doha Development Agenda, market liberalisation in developing countries, international regulation, agricultural trade and development, environmental protection and labour standards, promoting corporate social responsibility and improving the functioning of the World Trade Organization.

Understanding the imaginary war Matthew Grant, Benjamin Ziemann, 2016-09-01. This collection offers a fresh interpretation of the Cold War as an imaginary war, a conflict that had imaginations of nuclear devastation as one of its main battlegrounds. The book includes survey chapters and case studies on Western Europe, the USSR, Japan and the USA. Looking at various strands of intellectual debate and at different media from documentary film to fiction, the chapters demonstrate the difficulties to make the unthinkable and unimaginable nuclear apocalypse imaginable. The book will be required reading for everyone who wants to understand the cultural dynamics of the Cold War through the angle of its core ingredient: nuclear weapons.

Anime's Knowledge Cultures Jinying Li, 2024-03-12. Unlocking the technosocial implications of global geek cultures. Why has anime, a low tech medium from last century, suddenly become the cultural new cool in the information age? Through the lens of anime and its transnational fandom, Jinying Li explores the meanings and logics of geekdom as one of the most significant sociocultural groups of our time. In *Anime's Knowledge Cultures*, Li shifts the center of global geography in knowledge culture from the computer boys in Silicon Valley to the anime fandom in East Asia. Drawing from film studies, animation studies, media theories, fan studies and area studies, she provides broad cultural and theoretical explanations of anime's appeal to a new body of tech-savvy knowledge workers and consumers commonly known as geeks, otaku or zhai. Examining the forms, techniques and aesthetics of anime as well as the organization practices and sensibilities of its fandom, *Anime's Knowledge*

Cultures is at once a theorization of anime as a media environment as well as a historical and cultural study of transnational geekdom as a knowledge culture Li analyzes anime culture beyond the national and subcultural frameworks of Japan or Japanese otaku instead theorizing anime's transnational transmedial network as the epitome of the postindustrial knowledge culture of global geekdom By interrogating the connection between the anime boom and global geekdom Li reshapes how we understand the meanings and significance of anime culture in relation to changing social and technological environments

Preserving the Landscape of Imagination, 2023-07-10 **Of Cigarettes, High Heels, and Other Interesting Things** Marcel Danesi, 2018-04-27 This book deals with one of the most interesting aspects of human life the search for meaning It discusses how the science of semiotics is equipped to provide insight on what meaning is and how we produce it Why is it that certain people routinely put their survival at risk by smoking Why is it that some women make locomotion difficult for themselves by donning high heel footwear Are there unconscious forces at work behind such strange behaviors This book will attempt to answer such questions by claiming that these behaviors are meaningful in culture specific ways The discipline that studies such behaviors and their relation to meanings is called semiotics Semiotics probes the human condition in its own peculiar way by unraveling the meanings of signs which motivate not only the wearing of high heel shoes but also the construction of words and art forms Now in its third edition this landmark introduction to semiotics has been updated with a wealth of new content focusing on the many developments in digital culture since the previous edition With the addition of topics such as memes Selfies social media profiles and even Mafia discourse the new edition comprehensively covers new trends in culture while streamlining treatments of basic semiotics contents *Perfecting Human Futures* J. Benjamin Hurlbut, Hava Tirosh-Samuelson, 2016-02-22 Humans have always imagined better futures From the desire to overcome death to the aspiration to dominion over the world imaginations of the technological future reveal the commitments values and norms of those who construct them Today the human future is thrown into question by emerging technologies that promise radical control over human life and elicit corollary imaginations of human perfectibility This interdisciplinary volume assembles scholars of science and technology studies sociology philosophy theology ethics and history to examine imaginations of technological progress that promises to transcend the constraints of human body and being Attending in particular to transhumanist and posthumanist visions the volume breaks new ground by exploring their utopian and eschatological dimensions and situating them within a broader context of ideas institutions and practices of innovation The volume invites specialists and general readers to explore the stakes of contemporary imaginations of technological innovation as a source of progress a force of social and historical transformation and as the defining essence of human life **Imaginary Futures** Richard Barbrook, 2007-04-20 This book is a history of the future It shows how our contemporary understanding of the Internet is shaped by visions of the future that were put together in the 1950s and 1960s At the height of the Cold War the Americans invented the only working model of communism in human history the Internet

Yet for all of its libertarian potential the goal of this hi tech project was geopolitical dominance the ownership of time was control over the destiny of humanity The potentially subversive theory of cybernetics was transformed into the military friendly project of artificial intelligence Capitalist growth became the fastest route to the information society The rest of the world was expected to follow America s path into the networked future Today we re still being told that the Internet is creating the information society and that America today is everywhere else tomorrow Thankfully at the beginning of the twenty first century the DIY ethic of the Internet shows that people can resist these authoritarian prophecies by shaping information technologies in their own interest Ultimately if we don t want the future to be what it used to be we must invent our own improved and truly revolutionary future
