Contaminants of Emerging Concerns and Reigning Removal Technologies Manish Kumar, Sanjeeb Mohapatra, Kishor Acharya, 2022-06-30 With an increased demand for wastewater reuse groundwater recharge with treated wastewater has been practiced across the globe As a result groundwater quality deteriorates by emerging micropollutants from various anthropogenic origins including untreated wastewater seepage of landfill leachate and runoff from agricultural lands The fate of such emerging and geogenic contaminants in subsurface systems especially in the groundwater depends on several factors Physicochemical properties of contaminants such as octanol water partition coefficient dissociation constant water solubility susceptibility to biodegradation under anaerobic conditions and environmental persistence under diverse geological and pH conditions play a critical role during subsurface mass flow Thus advanced wastewater treatment techniques followed by implementing stricter guidelines are some of the measures that can safeguard water resources This

book in general gives an understanding of the fate and mitigation strategies for emerging and geogenic contaminants in the groundwater. The first and second sections provide a detailed insight into various removal techniques and mitigation approaches. Possible treatment strategies including bioremediation and natural attenuation are also covered in those sections. Environmental assessment, groundwater vulnerability, health effects, and regulations pertaining to various contaminants are systematically presented in the third section.

Selection of the HPLC Method in Chemical Analysis Serban C. Moldoveanu, Victor David, 2016-11-01. Selection of the HPLC Method in Chemical Analysis serves as a practical guide to users of high performance liquid chromatography and provides criteria for method selection, development, and validation. High performance liquid chromatography (HPLC) is the most common analytical technique currently practiced in chemistry. However, the process of finding the appropriate information for a particular analytical project requires significant effort and pre-existent knowledge in the field. Further sorting through the wealth of published data and literature takes both time and effort away from the critical aspects of HPLC method selection. For the first time, a systematic approach for sorting through the available information and reviewing critically the up-to-date progress in HPLC for selecting a specific analysis is available in a single book. Selection of the HPLC Method in Chemical Analysis is an inclusive go-to reference for HPLC method selection, development, and validation. It addresses the various aspects of practice

and instrumentation needed to obtain reliable HPLC analysis results Leads researchers to the best choice of an HPLC method from the overabundance of information existent in the field Provides criteria for HPLC method selection development and validation Authored by world renowned HPLC experts who have more than 60 years of combined experience in the field
