**Tales of Discovery** Miguel M. Garcia, 2024-01-02 Research data sharing has traditionally been addressed to other peer researchers Nowadays there is general awareness that putting research at the disposal of society is beneficial and necessary However the popularization of science is a hard endeavor It must deal with transmission of transcendental knowledge with the appealing adornment of a good story but avoiding the risk of falling into banality This book consists in a series of individual stories delving into the world of biology and medicine Some topics included in this volume consist in the explanation of basic biological concepts like the origin of modern eukaryotic cells the importance of

mutations as the driving force behind evolution the molecular ins and outs of the nervous system or the relevance of microorganisms to humans and science including food and energy industries Others rather lean to a more biomedical perspective and constitute popular cases that have been to some extent trending in global media outlets the divulgation of some current under reckoned non infectious pandemics like obesity and chronic pain the presence of longer living populations around the world named blue zones the American and African opioid crisis or the discovery and development of CRISPR Cas as a promising genetic editing tool All chapters are depicted with accompanying illustrations thoroughly elaborated by professionals of Fine Arts to make it easier to understand for the non experts but may perhaps also proof that the scientific method and multidisciplinary work are not unique to natural sciences but also shared by other apparently distant disciplines like arts

construct new cellular components and do cellular work Hence microorganisms should have a constant supply of nutrients and a source of energy which are ultimately derived from the organism's environment The author in this fifth chapter Microbial Nutrition describes the basic common nutrients required for the microbial growth nutritional types of microorganisms nutritional and physical requirements of microbial growth and the various nutrient uptake mechanisms with a special emphasis on the passive and active transport group translocation and Iron uptake Culture is an in vitro technique of growing or cultivating microorganisms or only other cells in a suitable nutrients medium called a culture medium in the laboratory A culture medium is a solid or liquid preparation used to grow transport and store microorganisms Different microorganisms require different nutrient materials All the microbiological studies depend on the ability to grow and maintain microorganisms in the laboratory which is possible only if suitable culture media are available The author in the sixth chapter Culture media and methods have described the historical prospective of the culture medium important factors for cultivation common ingredients of a culture medium classification of culture media based on consistency nutritional component and function use special culture techniques and some of the commonly used laboratory media have been briefly described People have been practicing disinfection and sterilization unknowingly since time immemorial though the existence of microorganisms was unknown The complete destruction or removal of all living microorganisms or their spores by any physical chemical or mechanical means is called sterilization Sterilization can be accomplished by using heat filtration and gases A satisfactory sterilization process is designed to ensure a high probability of achieving sterility This author in the seventh chapter Sterilization have described the basic principles of sterilization factors influencing the effectiveness of antimicrobial agents various physical and chemical agents and other agents of sterilization The strain development is a primary step in the process of fermentation or growth studies carried out in any fermentation process or microbiological research which enables to increase the population of microorganisms from stock culture to obtain cells in an active and exponential growth phase The author in the eighth chapter Strain development and improvement have described the historical prospective of fermentation with reference to brewing and bakers yeast development of inoculum for bacteria and fungi He has described the conventional Metagenomics genetic engineering and mutation selection and latest strain improvement methods such as the genomic transcriptome proteomic and metabolome analysis Microbial culture preservation aims at maintaining a microbial strain alive uncontaminated without variation or mutation The author in the ninth chapter Culture Preservation describes the relevance of various culture preservation techniques with the objective of maintaining live strains uncontaminated and to prevent change in their characteristics
