New Holland Combine Harvester Manual:

Accessibility and Acceptability in Technical Manuals Inger Lassen, 2003-05-01 Accessibility and Acceptability in Technical Manuals is written for an audience with a general interest in readability studies linguistics and technical writing With the main emphasis on technical manuals the book is primarily targeted at those who have a special interest in the design and use of utility texts and how these texts are received and understood by a multifaceted audience Accessibility is not a new research area and many explanations have been offered over the past years as to why non experts often have difficulties in comprehending texts written by technological experts This book offers a new approach to accessibility studies by exploring not only style but also attitudes to style by asking text consumers which style they prefer for different parts of the manual A key role is played by the Systemic Functional Linguistics notion of grammatical metaphor a stylistic choice that is commonly used in technical literature Grammatical metaphor although apparently obstructing the comprehension process of some readers is a common element in the preferred style that separates the insiders from the outsiders An explanation of this rather surprising result is offered by resorting to Critical Discourse Analysis

Development of control concepts for improved driving dynamics of harvesting machines with large headers Benedikt Jung, 2018-06-27 This book examines the driving dynamics of harvesting machines with large harvesting heads It looks at how to efficiently use these machines The author explores a common problem that hinders machine performance when harvesting with very large headers He deals with concepts for reducing the undesired effects of vehicle dynamics when using these machines With the steadily increasing capacity of harvesting machines the working widths of the harvesting heads get wider and the headers get heavier It has become essential with these giant headers to use header height sensors and header control systems to avoid the headers from being run into the ground when encountering elevation changes in the terrain A fundamental limitation of the viable speed of header height adjustments arises from the combination of the wider and heavier headers with soft agricultural tires The current solution to find an appropriate speed of header height adjustments is to perform a header calibration whenever a new header is attached to the machine and to endow the machine operator with the capability to tweak the speed of adjustments manually The result of an inappropriate speed of height adjustments is a reduction in overall productivity and an under utilization of the harvesting machine The author looks at ways to prevent this He offers detailed modeling of the vertical dynamics including dynamic wheel loads In addition the book contains results from simulations and machine tests
