This authoritative handbook part of the Helm Identification Guides series looks in detail at the world's 170 species of robins and chats. This large family of small passerines was formerly considered to be part of the thrush family Turdidae but is now usually treated as a separate family Muscicapidae together with the Old World flycatchers. The vast majority of species are Eurasian or African with only a handful of species straying into the New World or Australasia. The Australian Robins although superficially similar have long been regarded as a separate family. Robins and chats are a diverse family comprising both highly colourful and visible species such as the robin chats of Africa as well as some of the most skulking and elusive birds such as the shortwings of Asia. Many chats such as the well known Nightingale are renowned songsters and a good number are highly sought after by world listers for their extreme rarity or simply because they are hard to see. This book discusses the identification and habits of these birds on a species by species basis bringing together the very latest research with accurate range maps more than 600 stunning colour photographs that illustrate age and racial plumage differences and 64 superb colour plates by the internationally renowned artist Chris Rose. This authoritative and sumptuous book will be an essential purchase for all chat enthusiasts and will become the standard reference on the subject for many years to come.
