

DESCRIPTION AND OPERATION

With lever (1, fig. 10) on E and solenoid valve (1, fig. 15) energized, the hydraulic diagram of the control valve is the one shown in the figure 15.

The line (11) receives pressurized oil from the pump and the control valve (4) directs the pressurized oil to the solenoid control valve (1).

With the solenoid valve (1) activated, the delivery line to the PTO clutch engagement cylinder (2) is pressurized, while the delivery line to clutch brake (3) discharges and is connected to line (10).

The PTO clutch is therefore engaged and the clutch brake is disengaged.

The hydraulic diagram shown in fig. 21, illustrates this phase. In this phase the delivery line (7, fig. 21) is pressurized, so the lubrication control valve (8), takes on the position shown in the figure, permitting lubrication of the clutch front/rear bearings and the clutch.

The pressurized oil from line (11, fig. 15) can also be used for the services on lines (8) and (9).

The figure shows solenoid valve (5) and (6) activated. With the solenoid valve (5) activated, the delivery line (9) is pressurized and FWD is disengaged.

With the solenoid valve (6) activated, the delivery line (8) is pressurized and the front and rear differential lock is engaged.
