Newton A Very Short Introduction:

Newton Rob Iliffe, 2007-01-25 This Very Short Introduction uses Newton's own unpublished writings to provide fascinating insight into the man who kept the Royal Society under his thumb, was Head of the Mint and whose contributions to our understanding of the heavens and the earth are considered by many to be unparalleled. The author begins with the legends surrounding Newton, before next exploring the forces that shaped his life, introducing along the way many of the key thinkers and politicians of the time. Although Newton's science was largely revered, his reputation reached near-immortal status with the publication of the *Principia*; theologically, his beliefs were very controversial. He was a fanatical Protestant and claimed that tribes like the Goths, Vandals, and Huns had tried to save the planet from the corruption of the Catholics. He was also convinced that he was specially chosen by God to protect the original pure form of Christianity and viewed any criticisms directed at him as a form of persecution. Resisting the urge to show how Newton's views on alchemy, mathematics, physics, and religion complemented one another, the author instead emphasises that these were the very different obsessions of an extremely complex man whose beliefs at the time dominated England's political, religious, and intellectual landscape. Voltaire: A Very Short Introduction Nicholas Cronk, 2017-02-10 Voltaire 1694-1778, best remembered as the author of *Candide*, is one of the central actors, arguably the defining personality, of the European Enlightenment. In this Very Short Introduction, Nicholas Cronk explores Voltaire's remarkable career and demonstrates how his thinking is pivotal to our notion and understanding of the Enlightenment. In a fresh and modern examination of his writings, Cronk examines the nature of Voltaire's literary celebrity, demonstrating the extent to which his work was reactive and practical and therefore made sense within the broader context of the debates to which he responded. The most famous living author in Europe in the 18th century, Cronk emphasises Voltaire's skills of performance as a writer and his continued relevance today. He concludes by looking not only at Voltaire's impact in literature and philosophy but also his influence on French political values and modern French politics. Matter: A Very Short Introduction Geoff Cottrell, 2019-03-28 What is matter? Matter is the stuff from which we and all the things in the world are made. Everything around us, from desks to books to our own bodies, are made of atoms, which are small enough that a million of them can fit across the breadth of a human hair. Inside every atom is a tiny nucleus, and orbiting the nucleus is a cloud of electrons. The nucleus is made out of protons and neutrons, and by zooming in further

you would find that inside each there are even smaller particles quarks Together with electrons the quarks are the smallest particles that have been seen and are the indivisible fundamental particles of nature that have existed since the Big Bang almost 14 billion years ago The 92 different chemical elements that all normal matter is made from were forged billions of years ago in the Big Bang inside stars and in violent stellar explosions This Very Short Introduction takes us on a journey from the human scale of matter in the familiar everyday forms of solids liquids and gases to plasmas exotic forms of quantum matter and antimatter On the largest scales matter is sculpted by gravity into planets stars galaxies and vast clusters of galaxies All the matter that that we normally encounter however constitutes only 5% of the matter that exists The remaining 95% comes in two mysterious forms dark matter and dark energy Dark matter is necessary to stop the galaxies from flying apart and dark energy is needed to explain the observed acceleration of the expansion of the universe Geoff Cottrell explores the latest research into matter and shows that there is still a lot we don't know about the stuff our universe is made of ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Describing the Hand of God Robert Brennan, 2016-04-28 The question of divine agency in the world remains one important unresolved underlying obstacle in the dialogue between theology and science Modern notions of divine agency are shown to have developed out of the interaction of three factors in early modernity Two are well known late medieval perfect being theology and the early modern application of the notion of the two books of God's revelation to the understanding of the natural order It is argued the third is the early modern appropriation of the Augustinian doctrine of inspiration This assumes the soul's existence and a particular description of divine agency in humans which became more generally applied to divine agency in nature Whereas Newton explicitly draws the parallel between divine agency in humans and that in nature Darwin rejects its supposed perfection and Huxley raises serious questions regarding the traditional understanding of the soul This book offers an alternative incarnational description of divine agency freeing consideration of divine agency from being dependent on resolving the complex issues of perfect being theology and the existence of the soul In conversation with Barth's pneumatology this proposal is shown to remain theologically coherent and plausible while resolving or avoiding a range of known difficulties in the science theology dialogue *Enlightenment Thought* Margaret L. King, 2019-02-19

Margaret L King has put together a highly representative selection of readings from most of the more significant but by no means the most obvious texts by the authors who made up the movement we have come to call the Enlightenment They range across much of Europe and the Americas and from the early seventeenth century until the end of the eighteenth In the originality of the choice of texts in its range and depth this collection offers both wide coverage and striking insights into the intellectual transformation which has done more than any other to shape the world in which we live today It is simply the best introduction to the subject now available Anthony Pagden UCLA and author of *The Enlightenment and Why It Still Matters* *Ghostwalk* Rebecca Stott, 2007-05-08 A Cambridge historian Elizabeth Vogelsang is found drowned clutching a glass prism in her hand The book she was writing about Isaac Newton's involvement with alchemy the culmination of her lifelong obsession with the seventeenth century remains unfinished When her son Cameron asks his former lover Lydia Brooke to ghostwrite the missing final chapters of his mother's book Lydia agrees and moves into Elizabeth's house a studio in an orchard where the light moves restlessly across the walls Soon Lydia discovers that the shadow of violence that has fallen across present day Cambridge which escalates to a series of murders may have its origins in the troubling evidence that Elizabeth's research has unearthed As Lydia becomes ensnared in a dangerous conspiracy that reawakens ghosts of the past the seventeenth century slowly seeps into the twenty first with the city of Cambridge the bridge between them Filled

with evocative descriptions of Cambridge past and present Ghostwalk centers around a real historical mystery that Rebecca Stott has uncovered involving Newton's alchemy In it time and relationships are entangled the present with the seventeenth century and figures from the past with the love torn twenty first century woman who is trying to discover their secrets A stunningly original display of scholarship and imagination and a gripping story of desire and obsession Ghostwalk is a rare debut that will change the way most of us think about scientific innovation the force of history and time itself *Women, the Novel, and Natural Philosophy, 1660-1727* K. Gevirtz, 2014-03-06 This book shows how early women novelists from Aphra Behn to Mary Davys drew on debates about the self generated by the scientific revolution to establish the novel as a genre Fascinated by the problematic idea of a unified self underpinning modes of thinking female novelists innovated narrative structures to interrogate this idea **Imagining the Creator God** Georges De Schrijver, 2016-09-30 Ever since it was demonstrated in the 1920s that the universe with its trillions of galaxies is caught up in a process of steady expansion it became evident that it must have originated from an initial singularity a Big Bang which gave rise to the formation of subatomic parts atoms molecules clouds of gas and finally stars and galaxies Running this expansion back in time scientists began to reckon with the miracle of an evolving universe of which we are the outcome the iron in our blood has been formed in the stars This book gives an overview of the cosmologies that were in vogue in antiquity the Jewish and Christian concepts of Creation and the classical thinkers in Greek cosmology Plato Aristotle and Ptolemy and in modern times Copernicus Galileo Kepler and Newton The book brings us right down to the present day with a careful and readable treatment of the scientific innovations inaugurated by Einstein and the specialists in quantum physics and to recent developments in astrophysics This path of exploration opens the avenue for imagining a Creator God who is so generous that he invites creation to share in his own creativity *The Human Cosmos* Jo Marchant, 2020-09-01 A Best Book of 2020 NPR A Best Book of 2020 The Economist A Top Ten Best Science Book of 2020 Smithsonian A Best Science Technology Book of 2020 Library Journal A Must Read Book to Escape the Chaos of 2020 Newsweek Starred review Booklist Starred review Publishers Weekly An historically unprecedented disconnect between humanity and the heavens has opened Jo Marchant's book can begin to heal it For at least 20 000 years we have led not just an earthly existence but a cosmic one Celestial cycles drove every aspect of our daily lives Our innate relationship with the stars shaped who we are our art religious beliefs social status scientific advances and even our biology But over the last few centuries we have separated ourselves from the universe that surrounds us It's a disconnect with a dire cost Our relationship to the stars and planets has moved from one of awe wonder and superstition to one where technology is king the cosmos is now explored through data on our screens not by the naked eye observing the natural world Indeed in most countries modern light pollution obscures much of the night sky from view Jo Marchant's spellbinding parade of the ways different cultures celebrated the majesty and mysteries of the night sky is a journey to the most awe inspiring view you can ever see looking up on a clear dark night That experience and the thoughts it
