Nell, 2012-12-06 ICEIMT 97 is the second International Conference on Enterprise Integration and Modeling Technology Like the first it is the main event of a European US initiative on building consensus in enterprise engineering and integration supported in Europe by Esprit and in the USA by DOC NIST These proceedings contain papers presented at the conference and at five international workshops preceding the conference The workshops addressed integration issues related to people and organization metrics and standardization applications fundamentals and principles and users and vendors The conference papers present points of view of users vendors and researchers the current state of research and development worldwide and the needs to be identified and summarized in project proposals *Forensic Genetic Approaches for Identification of Human Skeletal Remains* Angie Ambers, 2022-11-15 *Forensic Genetic Approaches for Identification of Human Skeletal Remains Challenges Best Practices and Emerging Technologies* provides best practices on processing bone samples for DNA testing The book outlines forensic genetics tools that are available for the identification of skeletal remains in contemporary casework and historical archaeological investigations Although the book focuses primarily on the use of DNA for direct identification or kinship analyses it also highlights complementary disciplines often used in concert with genetic data to make positive identifications such as forensic anthropology forensic odontology and forensic art sculpting Unidentified human remains are often associated with tragic events such as fires terrorist attacks natural disasters war conflicts genocide airline crashes homicide and human rights violations under oppressive totalitarian regimes In these situations extensive damage to soft tissues often precludes the use of such biological samples in the identification process In contrast bone material is the most

resilient viable sample type for DNA testing DNA recovered from bone often is degraded and in low quantities due to the effects of human decomposition environmental exposure and the passage of time The complexities of bone microstructure and its rigid nature make skeletal remains one of the most challenging sample types for DNA testing Provides best practices on processing bone samples for DNA testing Presents detailed coverage of proper facilities design for skeletal remains processing selection of optimal skeletal elements for DNA recovery specialized equipment needed preparation and cleaning of bone samples for DNA extraction and more Highlights complementary disciplines often used in concert with genetic data to make positive identifications such as forensic anthropology forensic odontology and forensic art sculpting *StarBriefs Plus* Andre Heck,2004-04-30 With about 200 000 entries *StarBriefs Plus* represents the most comprehensive and accurately validated collection of abbreviations acronyms contractions and symbols within astronomy related space sciences and other related fields As such this invaluable reference source and its companion volume *StarGuides Plus* should be on the reference shelf of every library organization or individual with any interest in these areas Besides astronomy and associated space sciences related fields such as aeronautics aeronomy astronautics atmospheric sciences chemistry communications computer sciences data processing education electronics engineering energetics environment geodesy geophysics information handling management mathematics meteorology optics physics remote sensing and so on are also covered when justified Terms in common use and or of general interest have also been included where appropriate *FSL in Review Forecast Systems Laboratory* (U.S.),1998 **StarBriefs 2001** ,2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory *StarGuides* or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions **Voice & Data** ,2006 Al-Qa'ida's Doctrine for Insurgency 'Abd Al-'Aziz Al-Muqrin,2009 A window into Al Qa ida s strategic thinking Scientific and Technical Aerospace Reports ,1992 **Information Infrastructure Systems for Manufacturing II** John J. Mills,Fumihiko Kimura,1999-05-31 In this global society manufacturers compete in many ways and information infrastructures play a critical role in ensuring the right information is available at the right time and the right place to support informed decision making The traditional approach that assumes all information can be located

on a single mainframe and accessed by everybody in the enterprise has fallen by the wayside and new infrastructures supporting extended or virtual enterprises and globally distributed supply chains are becoming increasingly vital to successful competitive organizations. Functions data and information must be made available to all without regard to location accessibility or the ability to view in a native format. This book is a result of a conference which brought together a number of leading experts from around the world that work on topics related to the design implementation and use of information infrastructures for manufacturing. These experts presented their views on the state of the art and on a wide variety of topics related to the title. The topics range from the establishment of a generic enterprise framework which can be used for the design of a supporting information infrastructure to details of how geometric surfaces should be merged together. Although not an exhaustive publication we believe that the publications in this book represent the state of the art in this research is essential reading for anyone who is attempting the design or development of an information infrastructure for all aspects of Manufacturing.

Methods and Tools for Effective Knowledge Life-Cycle-Management
Alain Bernard, Serge Tichkiewitch, 2008-04-01

Knowledge Management is a wide critical and strategic issue for all the companies from the SMEs to the most complex organizations. The key of competitiveness is knowledge because of the necessity of reactivity flexibility agility and innovation capacities. Knowledge is difficult to measure itself but what is visible this is the way of improving products technologies and enterprise organizations. During the last four years based on the experience of most of the best experts around the World CIRP The International Academy for Production Engineering has decided to prepare and structure a Network of Excellence NoE proposal. The European Community accepted to found the VRL KCiP Virtual Research Laboratory Knowledge Community in Production. As its name indicates it the aim of this NoE was really to build a Knowledge Community in Production. This was possible and realistic because the partners were representative of the most important universities in Europe and also because of strong partnerships with laboratories far from Europe Japan Australia South Africa USA etc. Based on such powerful partnership the main issue was to help European manufacturing industry to define and structure the strategic knowledge in order to face the strategic worldwide challenges. Manufacturing in Europe currently has two essential aspects:

- 1 It has to be knowledge intensive given the European demands for high tech products and services e.g. electronics medicines.

Clinical Forensic Medicine Margaret M. Stark, 2011-09-22

The publication of this third edition of the definitive text on clinical forensic medicine comes at an exciting time for a subject now gaining recognition as a speciality in the medical establishment. This growing acknowledgement reflects the fact that increasing numbers of health professionals are becoming engaged in general forensic services. Nurses and paramedics are more involved than ever in custody care while nurses themselves are conducting more examinations in cases involving alleged

sexual offences Thus it is vital that those caring for this vulnerable group of patients whether detainees or complainants have the tools to master this specialist set of skills All the chapters in this new edition have been fully updated with some undergoing extensive revision Recent developments in child protection protocols have prompted a major rewrite of the chapter on non accidental injury and the text now includes a specific chapter on the use of the TASER Other aspects of restraint are now dealt with separately The material on care of detainees and fitness for interview has been split into individual chapters to allow a more comprehensive discussion of the issues In addition new authors have joined the team of contributors facilitating a wider range of international perspectives From its chapters on the history and core principles of clinical forensic medicine right up to the text s discussion of substance misuse and deaths in custody this volume remains the gold standard source for health professionals whose working lives bring them into contact with those in the law enforcement arena

Military Strategy as Public Discourse Tadd Sholtis,2013-12-04 This book presents the current history of United States military strategy in Afghanistan as an example of dysfunctional policy discourse among the nation s elites The legitimacy of a country s military strategy can become a subject of intense public debate and doubt especially in prolonged conflicts Arguments typically hinge on disagreements about the values at stake the consequences of action or inaction and the authority of those responsible for the plan As the US entered its second decade at war in Afghanistan political and military leaders struggled to explain the ends and means of their strategy through internal policy debates the promotion of counterinsurgency doctrine and day to day accounts of the war s progress Military Strategy as

Public Discourse considers recent US strategy in Afghanistan as a form of valid and equitable public discussion among those with the ability to affect outcomes. The work examines the dominant forms of discourse used by the various groups of elites who make and execute strategy and considers how representations of these forms of discourse in news media shapes elite understanding of the purpose of US efforts in wars of choice. The book proposes how policy makers should address the problems of public discourse on war which tends to exclude or marginalize relevant elites and focus on narrow questions of validity. This book will be of much interest to students of strategic studies, US foreign policy and security studies in general.
