## **Methods To Analyse Agricultural Commodity Price Volatility:**

Methods to Analyse Agricultural Commodity Price Volatility Isabelle Piot-Lepetit, Robert M'Barek, 2011-06-10 This book examines the issue of price volatility in agricultural commodities markets and how this phenomenon has evolved in recent years. The factors underlying the price spike of 2007-08 appear to be global and macroeconomic in nature, including the rapid growth in demand by developing countries, the international financial crisis, and exchange rate movements. Some of these factors are new, appearing as influences on price volatility only in the last decade. Although volatility has always been a feature of agricultural commodity markets, the evidence suggests that volatility has increased in certain commodity markets. A growing problem is that agricultural price shocks and volatility disrupt agricultural markets, economic incentives, and incomes. With increased globalization and integration of financial and energy markets with agricultural commodity markets, the relationships between markets are expanding and becoming more complex. When a crisis, such as a regional drought, food safety scare, or a financial crisis, hits a particular market, policy makers often do not know the extent to which it will impact on other markets and affect producer, consumer, and trader decisions. Including contributions from experts at the World Bank, the Food and Agriculture Organization of the United Nations, the USDA, and the European Commission, the research developed throughout the chapters of this book is based on current methodologies that can be used to analyze price volatility and provide directions for understanding this volatility and the development of new agricultural policies. The book highlights the challenges facing policy makers in dealing with the changing nature of agricultural commodities markets and offers recommendations for anticipating price movements and managing their consequences. It will be a practical guide for both present and future policy makers in deciding on potential price stabilizing interventions and will also serve as a useful resource for researchers and students in agricultural economics.

*Agricultural Markets Instability* Alberto Garrido, Bernhard Brümmer, Robert M'Barek, Miranda Meuwissen, Cristian Morales-Opazo, 2016-01-08 Since the financial and food price crises of 2007, market instability has been a topic of major concern to agricultural economists and policy professionals. This volume provides an overview of the key issues surrounding food prices, volatility, focusing primarily on drivers, long-term implications of volatility, and its impacts on food chains and consumers. The book explores which factors and drivers are increasing volatility and which others are increasing price levels, and whether these two distinctive effects can be identified and measured. It considers the extent to which increasing

instability affects agents in the value chain as well as the actual impacts on the most vulnerable households in the EU and in selected developing countries It also analyses which policies are more effective to avert and mitigate the effects of instability Developed from the work of the European based ULYSSES project the book synthesises the most recent literature on the topic and presents the views of practitioners businesses NGOs and farmers organizations It draws policy responses and recommendations for policy makers at both European and on international levels

The EU, World Trade Law and the Right to Food Giovanni Gruni, 2018-08-09 In recent years the European Union has developed a comprehensive strategy to conclude free trade agreements which includes not only prominent trade partners such as Canada the United States and Japan but also numerous developing countries This book looks at the existing WTO law and at the new EU free trade agreements with the Caribbean and sub Saharan Africa through the lens of the human right to adequate food It shows how the clauses on the import and export of food included in recent free trade agreements limit the capacity of these countries to implement food security policies and to respect their human rights obligations This outcome appears to be at odds with international human rights law and dismissive of existing human rights references in EU founding treaties as well as in treaties between the EU and developing states Yet the book argues against the conception in human rights literature that there is an inflexible agenda encoded in world trade law which is fundamentally conflictual with non economic interests The book puts forward the idea that the European Union is perfectly placed to develop a narrative of globalisation considering other areas of public international law when negotiating trade agreements and argues that the EU does have the competences and influence to uphold a role of international leadership in designing a sustainable global trading system Will the EU be ambitious enough A timely contribution to the growing academic literature on the relation between world trade law and international human rights law this book imagines a central role for the EU in reconciling these two areas of international law
