Microbial Quality of Water Supply in Distribution Systems Edwin E. Geldreich, 2020-07-26 Hidden problems buried deep in the pipe networks of water distribution systems are very serious potential threats to water quality *Microbial Quality of Water Supply in Distribution Systems* outlines the processes and issues related to the degradation of water quality upon passage through networks of pipes storage reservoirs and standpipes on its way to the consumer The risks associated with biofilm accumulation bacteria and other contaminants are discussed in great detail In addition to its excellent microbiological coverage of organisms in drinking water and biofilms in distribution systems *Microbial Quality of Water Supply in Distribution Systems* provides clear treatments of the technical and public communication issues most commonly affecting the quality of water and water supply systems The inclusion of numerous case histories in this new book makes it a complete reference source for anyone concerned with water quality and water distribution systems *Microbial Quality of Water Supply in Distribution Systems* Edwin E. G. Ainsworth, 2004-08-31 The factors affecting the presence and growth of micro organisms in piped networks are reviewed in this book as are the practices of water supply organisations that can directly or indirectly influence their presence and growth The information and conclusions are intended for policy makers and those responsible for formulating Water Safety Plans for the supply of drinking water It is also relevant to engineers and scientists who are responsible for water supply planning operations and monitoring The review shows that there are often public health reasons for adopting a more proactive approach to many of the traditional practices used in designing operating and maintaining distribution networks and to modifying the composition of the water that is fed into the network Contents include the following topics The microbiology of piped distribution systems and public health Composition of treated waters to minimise potential for microbiological changes Design and operation of distribution networks Planned maintenance and survey of distribution systems Precautions during construction and repairs Small animals in drinking water distribution systems Risk management for distribution systems *Public Water Supply Distribution Systems* National Research Council, Division on Earth and Life Studies, Water Science and Technology

Board, Committee on Public Water Supply Distribution Systems: Assessing and Reducing Risks, 2005-05-12 The Water Science and Technology Board has released the first report of the Committee on Public Water Supply Distribution Systems Assessing and Reducing Risks which is studying water quality issues associated with public water supply distribution systems and their potential risks to consumers The distribution system which is a critical component of every drinking water utility constitutes a significant management challenge from both an operational and public health standpoint This first report was requested by the EPA as the agency considers revisions to the Total Coliform Rule with potential new requirements for ensuring the integrity of the distribution system This first report identifies trends relevant to the deterioration of drinking water quality in distribution systems and prioritizes issues of greatest concern according to high medium and low priority categories Of the issues presented in nine EPA white papers that were reviewed by the committee cross connections and backflow new or repaired water mains and finished water storage facilities were judged by the committee to be of the highest importance based on their associated potential health risks In addition the report noted that two other issues should also be accorded high priority premise plumbing and distribution system operator training This first report will be followed in about 18 months by a more comprehensive final report that evaluates approaches for risk characterization and identifies strategies that could be considered to reduce the risks posed by water quality deteriorating events Control of Biofilm Growth in Drinking
