simulation results Stefan Peter Müller, 2022-02-08 Big data thrives on extracting knowledge from a large number of data sets But how is an application possible when a single data set is several gigabytes in size The innovative data compression techniques from the field of machine learning and modeling using Bayesian networks which have been theoretically developed and practically implemented here can reduce these huge amounts of data to a manageable size By eliminating redundancies in location time and between simulation results data reductions to less than 1% of the original size are possible The developed method represents a promising approach whose use goes far beyond the application example of crash test

Versatile Video Coding Humberto Ochoa Dominguez,K.R. Rao,2022-09-01

Video is the main driver of bandwidth use accounting for over 80 per cent of consumer Internet traffic Video compression is a critical component of many of the available multimedia applications it is necessary for storage or transmission of digital video over today s band limited networks The majority of this video is coded using international standards developed in collaboration with ITU T Study Group and MPEG The MPEG family of video coding standards begun on the early 1990s with MPEG 1 developed for video and audio storage on CD ROMs with support for progressive video MPEG 2 was standardized in 1995 for applications of video on DVD standard and high definition television with support for interlaced and progressive video MPEG 4 part 2 also known as MPEG 2 video was standardized in 1999 for applications of low bit rate multimedia on mobile platforms and the Internet with the support of object based or content based coding by modeling the scene as background and foreground Since MPEG 1 the main video coding standards were based on the so called macroblocks However research groups continued the work beyond the traditional video coding architectures and found that macroblocks could limit the performance of the compression when using high resolution video Therefore in 2013 the high efficiency video

coding HEVC also known as H.265 was released with a structure similar to H.264 AVC but using coding units with more flexible partitions than the traditional macroblocks. HEVC has greater flexibility in prediction modes and transform block sizes; also, it has a more sophisticated interpolation and deblocking filters. In 2006, VC-1 was released. VC-1 is a video codec implemented by Microsoft and the Microsoft Windows Media Video 9 and standardized by the Society of Motion Picture and Television Engineers (SMPTE). In 2017, the Joint Video Experts Team (JVET) released a call for proposals for a new video coding standard initially called Beyond the HEVC Future Video Coding (FVC) or known as Versatile Video Coding (VVC). VVC is being built on top of HEVC for application on Standard Dynamic Range (SDR), High Dynamic Range (HDR), and 360 Video. The VVC is planned to be finalized by 2020. This book presents the new VVC and updates on the HEVC. The book discusses the advances in lossless coding and covers the topic of screen content coding. Technical topics discussed include: Beyond the High Efficiency Video Coding (HEVC) encoder, Screen content Lossless and visually lossless coding algorithms, Fast coding algorithms, Visual quality assessment, Other screen content coding algorithms, Overview of JPEG Series.
